Crypton VC does not guarantee, nor accepts any legal liability whatsoever arising from or connected to, the accuracy, reliability, currency, or completeness of any material contained in this white paper. Investors and potential CRN token holders should seek appropriate independent professional advice prior to relying on, or entering into any commitment or transaction based on, material published in this white paper, which material is purely published for reference purposes alone. CRN tokens will not be intended to constitute securities in any jurisdiction. This white paper does not constitute a prospectus or offer document of any sort and is not intended to constitute an offer of securities or a solicitation for investment in securities in any jurisdiction. Crypton VC does not give any opinion on any advice to purchase, sell, or otherwise transact with CRN tokens and the fact of presentation of this white paper shall not form the basis of, or be relied upon in connection with, any contract or investment decision. No person is bound to enter into any contract or binding legal commitment in relation to the sale and purchase of CRN tokens, and no cryptocurrency or other form of payment is to be accepted on the basis of this whitepaper.

IMPORTANT

You are not eligible for, and you cannot purchase any CRN tokens if you are a citizen or resident (tax or otherwise) of Singapore, or other Singapore Person. "Singapore Person" is generally defined as a natural person, residing in the Singapore or any entity organized or incorporated under the laws of Singapore.

You are not eligible for, and you cannot purchase any CRN tokens if you are a citizen or resident (tax or otherwise) of the People's Republic of China ("PRC"), or other PRC Person. "PRC Person" is generally defined as a natural person, residing in the People's Republic of China, or any entity organized or incorporated under the laws of the People's Republic of China.

Additionally, because of current regulatory uncertainty and before complementary information is publicly released on the matter, green card holders of the United States or citizens or residents (tax or otherwise) of the United States of America, Singapore or China, or other U.S., Singapore Person or PRC Person, are not eligible for registering as Continuous Contributors.

That limits the ability of U.S., Singapore, People's Republic of China persons to utilize CRN tokens and participate in the future development of the Crypton VC fund as well as in the distribution of proceeds.

EXECUTIVE SUMMARY

ABOUT CRYPTON VENTURE CAPITAL

Crypton VC is a blockchain / cryptocurrency venture capital fund, managed by team which has extensive experience (over 15 years) in setting up and managing investment funds, as well as conducting investment processes.

Our team have invested more than **$150M**, especially in FinTech / Blockchain / Internet / IT / MedTech projects.

GOALS

Crypton VC is a venture capital fund based on an ICO financial instrument that collecting funds as cryptocurrency for the creation of Crypton venture capital fund in exchange for digital assets (Crypton tokens - CRN).

The fund will invest in hi-tech startups from the FinTech area, based on Blockchain; as well as cryptocurrency and other ICOs.

For tokenizable projects in our defined portfolio, we will also anticipate launch for them ICO separately. Crypton token holders will receive **30%** of digital assets (tokens) from the pool of each subsequent ICO which will be launched by Crypton fund.

EXPERIENCE

- We are highly experienced FinTech professionals and investors.
- In total, we have invested over **$150M**, including **$2M** in projects related to Blockchain and cryptocurrency projects.
- We own **15+** FinTech companies.
- We have successfully completed over **50** investments mostly in FinTech area.
- We have invested together with: Wirtualna Polska (the largest internet portal in Poland, with a revenue of **$250M**, listed on Warsaw Stock Exchange with **$0.5B** market capitalization); Arteria S.A. (the largest capital group in business process outsourcing area in Poland with a revenue of $50M), T-mobile and many other companies.
- We have great experience gained in cooperation with: MasterCard, VISA, UBS, Oracle, Accenture, …

AWARDS AND CERTIFICATIONS

Deloitte Technology Fast 50 Central Europe Award

Winner in the **Dragon's Den** competition for the best investment project

PCI DSS (Payment Card Industry Data Security Standard) - the highest security certification for payment systems

MasterCard technology partner

Acquirer Agent – an institution authorizing and settling transactions using payment cards.

CRYPTON VC PARTNERS

uPaid is a company which is an **official partner of MasterCard** and for many years implementing advanced **payment systems** for it, having security certification of **PCI DSS** payment systems, employing a total of **over 90 FinTech experts**, whose one of the investment projects has the status of a Settlement Agent - giving him powers from the Polish government at a **level comparable to running your own bank.**

uPaid site: http://biznes.upaid.pl/en

ITligent Group - an IT company with many years of experience in the implementation of IT systems, including FinTech, employing **over 70 people**, including more than **50 programmers**, having among its clients such companies as PZU (the **largest insurance company in Poland**), Gorilla Group or RTB House (global giant on the RTB advertising market).

  Arteria S.A.
- **Managing Director / Board Member**
  MIT - Arteria S.A.
- **Senior IT Project Manager**
  Getin Noble Bank S.A.

Now

- **CTO**
  ITligent Group

BENEFITS FOR CRYPTON TOKEN HOLDERS

- The **Crypton tokens will be issued** to the **stock exchanges** in the first months after ICO**, with the possibility of their free sale or buy.**

  We are in talks with cryptocurrency exchanges and some of them are very interested in issuing Crypton tokens on their exchanges.

- **Quarterly payment of the dividend** - will be distributed among the Crypton token holders via a buy-back process.

  30% of the profits will be distributed among the Crypton token holders via a Crypton tokens buy-back process. In this way, distribution of income drives liquidity of the Crypton tokens.

  For **30%** of the Crypton profits, we will buy-back Crypton tokens from exchanges, and price of rest of the tokens will automatically increase.

- **Receipt 30% of tokens from running ICOs for portfolio projects.**

  30% of tokens from fund projects ICOs will be allocated proportionally to Crypton token holders without any additional fees.

- **Access to exclusive Pre-ICOs with high discounts.**

- **The right to vote on subsequent investment proposals.**

- **The possibility of active participation in the fund through the Crypton investment platform:**

  The Crypton platform provides in the DAO (Decentralized Autonomous Organization) model tools for investment portfolio structuring and management, as well as a holistic view of the available investment opportunities, and the fund's historical and current investment performance.

  The interface will allow the investor to:

  - Partner's dashboard with projects detailed analyses, financial information, return on investments (ROI), information on dividend payments, detailed information about tokens from ICO portfolio projects.
  - Access to projects subject to current analyses and due diligence.
  - Ability to review and comment of projects.
  - A transparent set of reports showing the distribution of funds, the progress of projects and the operation of the fund.
  - Access to vote on subsequent investment proposals.
  - Access to vote on exit from investment proposals.
  - Submit tokens for buy-back to participate in the distribution of the fund's revenue.
  - Download reports and export necessary analytical data.
  - Track the portfolio performance.
  - The possibility to contact and exchange experiences with other Crypton investors. If anybody wants, he can also become anonymous within the Crypton investment platform, while for other people it will give the opportunity to contact, exchange experiences, consult between them Crypton investment strategies, free contact with each other.

- **The possibility of additional individual investments in selected Crypton project projects.**

Starting from Q3 2018

30% of the profits will be distributed among the Crypton token holders via a buy-back process. In this way, distribution of income provides liquidity of the fund's tokens.

70% of the profits will be reinvested to multiply the return to the investors.

DIVERSIFICATION OF INVESTMENTS

40% of collected funds will be invested in defined portfolio of Crypton projects.

40% of collected funds will be invested in other ICOs / cryptocurrency after fundamental analysis and due diligence.

The remaining 20% of the collected capital will be allocated to:

1) the team involved in Crypton fund – analysts, traders, designers, project managers, lawyers, accountants, industry specialists, IT / blockchain specialists, …

2) building an ecosystem that supports ongoing investments – we aim for a comprehensive support of carrying out the projects from the investment portfolio, we wish to make available an entire ecosystem: from IT, to HR, finances, law, trade and marketing, so that the team doesn't waste time building this structure on their own from scratch, as it usually takes a lot of time.

These resources will not be made available to the investment projects for free, but they will be offered at attractive market prices. Every management team of a project will be able to decide on their own whether they want to use the available infrastructure or create their own from scratch.

Thanks to that, the originator can focus on the business development right away. This model is pretty much never used in other VC funds. Our investment experience says that it works out very well and cuts the time required for an investment project's market start even by half.

3) Marketing, Reserve

ICO SPECIFICATION

Token: CRYPTON – CRN

Token Exchange Rate: 1 CRN = 1 USD

Technology CRN token is a cryptocurrency implemented through ERC-20 Token Standard technology of smart contract, based on Ethereum.

Total token supply: 72 000 000

Tokens for ICO: 50 400 000 (**tokens not sold will be burn**)

Pre-ICO bonus: 30%

Payment methods: BTC, ETH

Mining: No

Tokens lockups: **All the tokens of the fund founders and the team will be subject to a lockup for 2 years.**

VISION

Crypton is a tokenized venture capital fund investing in promising projects in the FinTech area, and other cryptocurrency / ICOs. For projects with tokenization features, we will provide additional financial acceleration by launching separate ICOs.

Crypton token holders will receive 30% of digital assets (tokens) from the pool of each subsequent ICO which will be launched by Crypton fund.

We help monetize interesting projects based on our strong investment and business experience. We want to provide full support for investors on still uncertain and unregulated market of Blockchain-based projects.

KEY VALUES

1 GOALS

We want to give an opportunity for everybody to work with professional venture capital fund, enjoy all the benefits and invest any sum of money, even if they have only $1 in their wallet.

2 EXPERIENCE

Crypton experts have experience in managing venture capital fund and investments projects. For over 15 years, we have invested more than **$150M** in FinTech / Blockchain / Internet / IT / MedTech projects.

3 VALUE

Crypton fund is created by financial and IT experts who are widely appreciated in the business world. Our team does not risk it is good name so their care for reputation is a guarantee of Crypton's fund good name.

4 DIVERSIFICATION

Because of preliminary work on selection the fund's portfolio, Crypton token holders invest not in separate project, but in profitable and stable asset, minimizing the risks of losing funds with independent investments.

5 EXPERTISE

We involve the best professionals from financial and IT sectors who become a part of the Crypton team and help to avoid all the pitfalls.

6 EQUALITY

We are creating the Crypton platform which enable to vote on investment projects for every Crypton token holders. Each member can actively participate in the Crypton fund and have real impact on investment decisions.

FINTECH INVESTMENT MARKET

In the FinTech area, venture capital market is developing with incredible dynamics, not only in US but in the entire world. The sector of financial services, including FinTech will experience more changes in the next 10 years than in the last 100 years.

From 2013 to 2017, 250 of the most attractive FinTech startups (according to the CB Insights ranking) gained nearly $32B from investors. The scale of investor involvement in FinTech companies is growing rapidly. In 2015, FinTech projects raised $19B, and in the first half of 2016 more than $15B!

Source: www.businessinsider.com, The Fintech Report 2016. Financial industry trends and investment

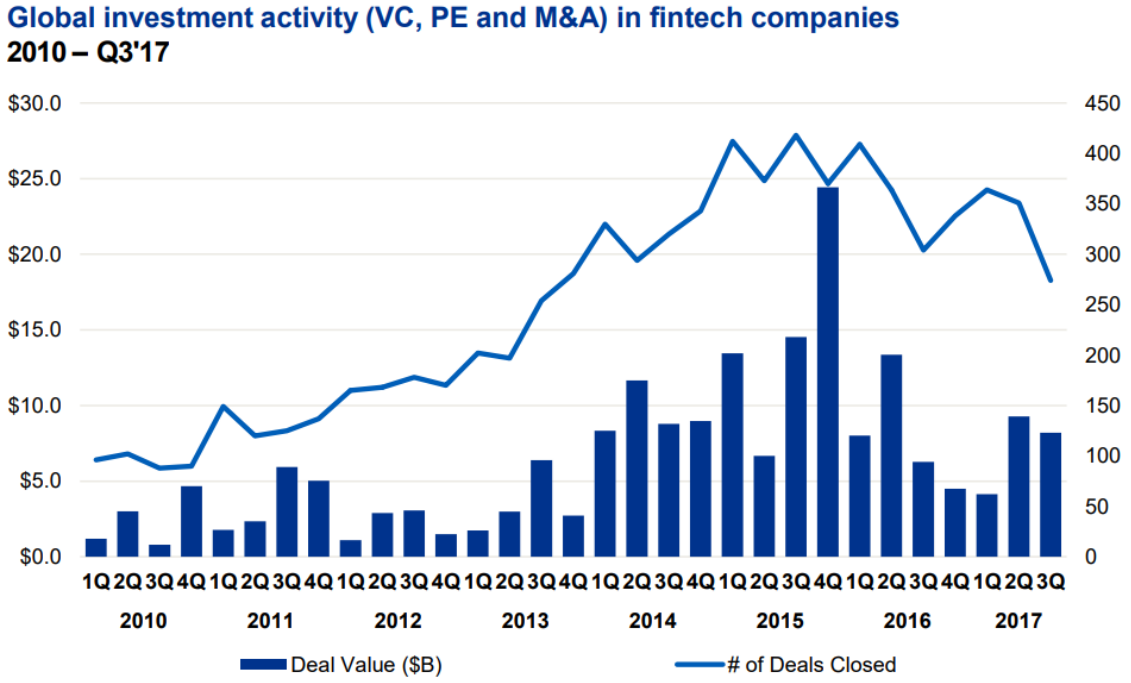

Chart 1: Global investment activity (VC, PE and M&A) in FinTech companies

Source: KMPG International Raport (data provided by PitchBook): The Pulse of Fintech Q3 2017, November 7, 2017

From around 2012, companies which develop technologies for the financial sector, are attracting more and more investments. This trend proves the business attractiveness of this sector and shows that investors believe in FinTech area.

In the 2011-2016, the value of the 50 largest FinTech companies increased by 169%, while the valuations of the 5 largest banks grew by 58%, the 50 largest insurers by 79%, and 5 technology companies (like Google, or Amazon) by an average of 140%.

Bearing in mind the Crypton team experience and the trends observed on global markets, we are convinced that investing in technologically ambitious, innovative Fintech / Blockchain projects are **very attractive investment goal**.

The market profile described above is consistent with the experience of Crypton Team, because Executive Team and Board of Investors:

- have extensive experience in establishing and developing innovative enterprises, venture capital funds and start-up projects;
- have invested over $150M, especially in FinTech projects;
- are owners of more than 15 FinTech companies including financial company which implements advanced payment system for MasterCard and UBS;
- have successfully completed over 50 investments in FinTech area;
- have at their disposal 250-team of FinTech experts.

We believe that Crypton VC fund is the future of the financial area, offering compelling advantages such as **transparency**, **tradability**, and **cost efficiency**.

CHANGES IN THE INVESTMENT WORLD

THE BLOCKCHAIN MARKET IS GROWING VERY RAPIDLY

The capitalization of the global crypto market was **$17.7B** at the beginning of 2017. For comparison, at the beginning of 2018 the capitalization has already reached **$830B** and it is still growing…

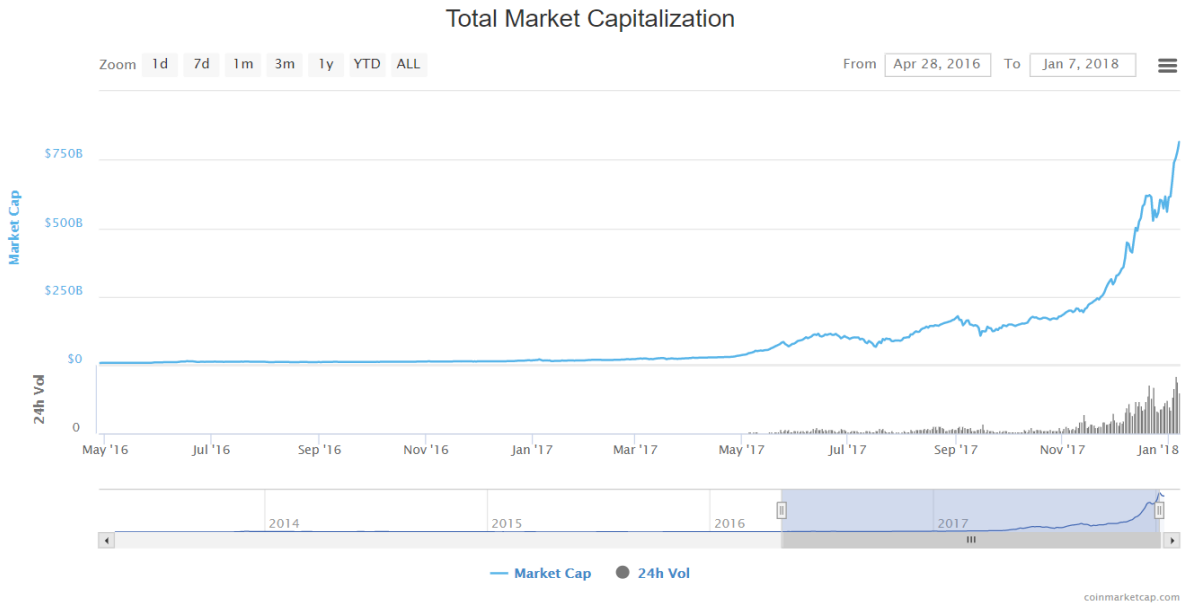

Chart 2: *Total Crypto Market Capitalization.*

Source: https://coinmarketcap.com (January 2018): Global Charts – Total Market Capitalization.

Further capitalization has dropped to the current value of (29th of March 2018): $300B

Chart 3: *Total Crypto Market Capitalization – few last months*

Source: https://coinmarketcap.com (29 March 2018): Global Charts – Total Market Capitalization.

Chart 4: *Total Crypto Market Capitalization – few last years*

THE DEVELOPMENT CYCLE OF INNOVATIVE TECHNOLOGIES

Innovative technologies that revolutionize the world tend to have a similar development cycle…

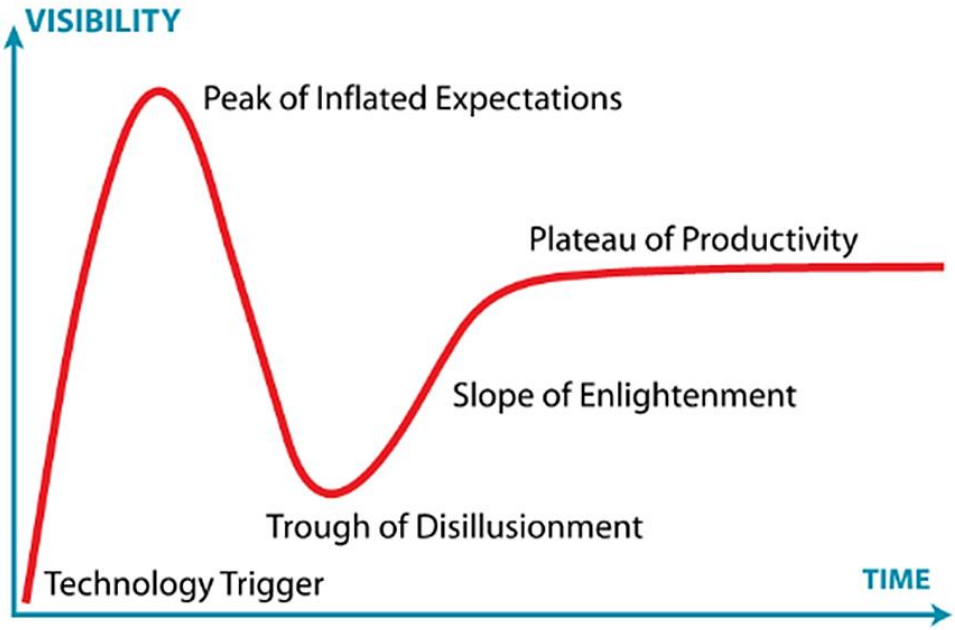

Chart 5: *Hype cycle*

Source: Gartner, https://en.wikipedia.org/wiki/Hype_cycle

Chart is representing the maturity, adoption and social application of revolutionary technologies. The hype cycle provides a graphical and conceptual presentation of the maturity of emerging technologies through five phases.

The graph doesn't show that before the period presented there might be plenty of years of gradual maturing and adaptation by those with tighter connections to the particular technology.

The technology reaches broader audience further down the line and causes delight and sudden increase in interest, also among those not knowing the basics of the particular technology.

Then comes the disappointment that the technology isn't mature enough yet to satisfy the high demands of an average user.

Some time passes, the technology matures and gradually goes back on the pedestal, except now being much more mature, actually capable of revolutionizing the whole market – just like it was with the Internet.

Blockchain is the Internet of money and it uses all of the advantages of the Internet too, so it doesn't have to create the ecosystem from scratch like was the case with the Internet – it was necessary to purchase the right devices everywhere, place the cables all around the world, create billions of websites….

.COM – AFTER THE BUBBLE, GIANTS AROSE

Such was the case i.e. with the Internet, where after a dynamic growth phase the bubble burst, only to have such giants of the today's Internet to rise from it in the following year as: Google, Facebook, Amazon, …

„The Dotcom bubble teaches a valuable lesson – most new ventures die, but survivors become winners that take all…„

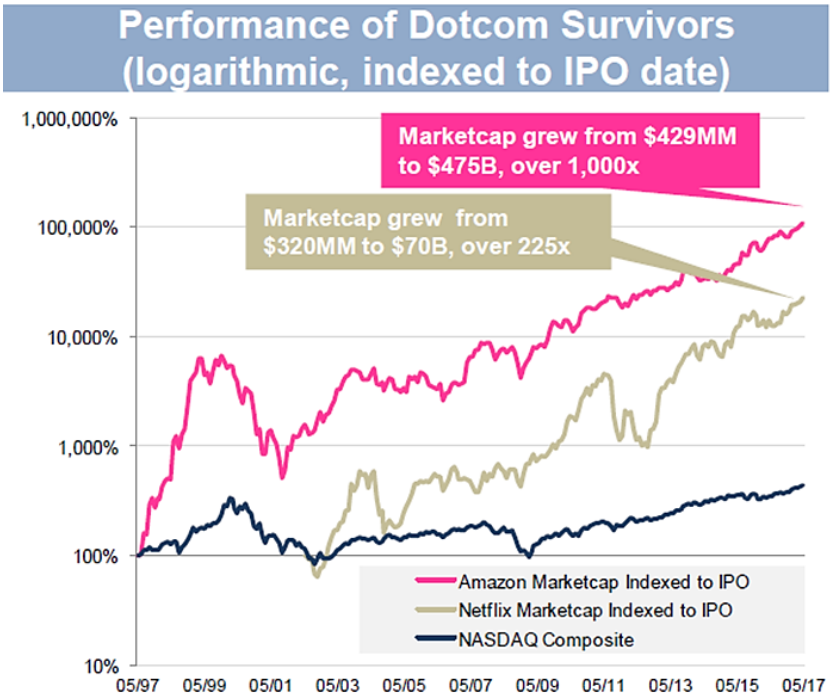

Chart 6: *Performance of Dotcom Survivors*

Source: NASDAQ / NASDAQ Composite

The Crypton team firmly believes that just like with the Internet, it is the same with the blockchain technology.

The only difference is that observations show blockchain to have the same business cycles as global traditional markets except that in blockchain, **it all goes 15 x faster**….

How the Bitcoin Bubble Is Mirroring the Dot-Com One, Only Happening 15 Times Faster

http://fortune.com/2018/03/20/morgan-stanley-bitcoin-bubble-mirror-dot-com-bubble-cryptocurrency/

Bitcoin's rough patch looks like the Nasdaq during the tech bubble — except it's moving 15 times faster

http://www.businessinsider.com/bitcoin-price-morgan-stanley-says-cryptocurrency-like-tech-bubble-era-nasdaq-but-15-times-faster-2018-3?IR=T

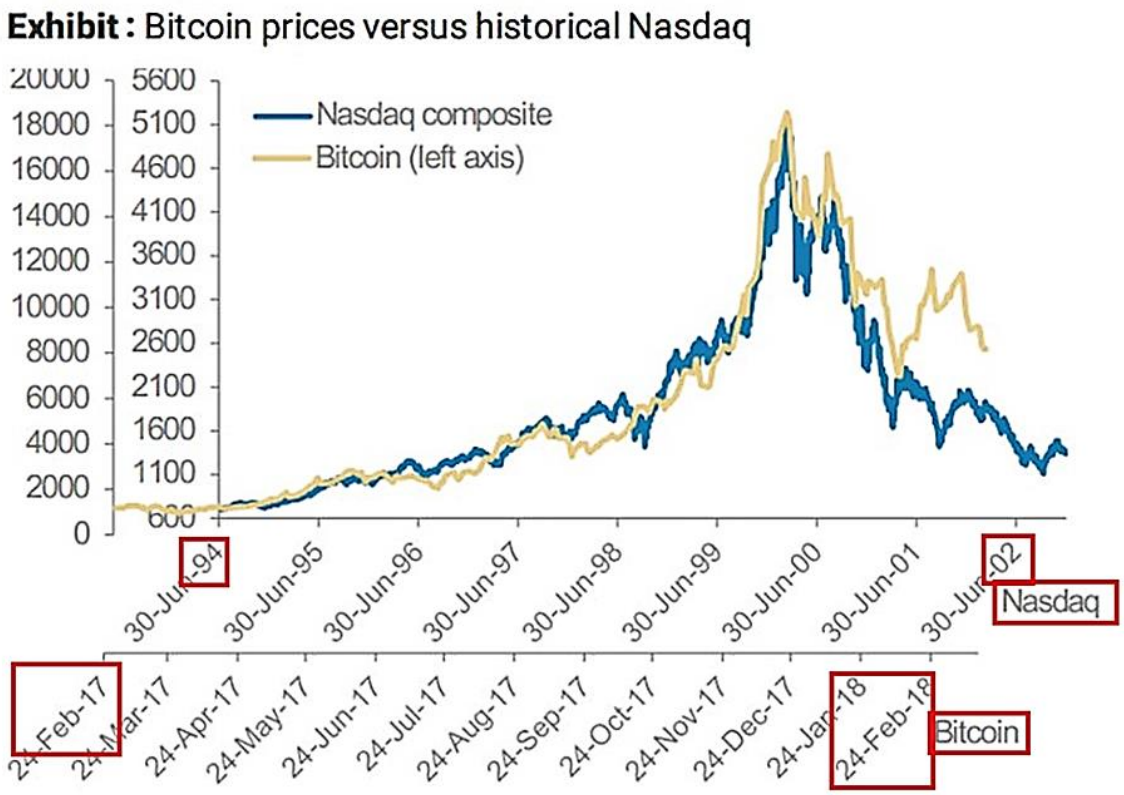

Chart 7: *Bitcoin prices versus historical Nasdaq*

Source: Morgan Stanley

The movements in the cryptocurrency exchange rates mirror those from the Internet bubble period, except they go 15 x faster!

After the Internet bubble, giants arose: Google, Facebook, Amazon, … and a whole new economy that has revolutionized the world.

CRYPTOCURRENCY BUBBLES HAVE BURST MANY TIMES SO FAR AND EVERY TIME, THE EXCHANGE RATE WOULD GROW MUCH HIGHER THAN BEFORE

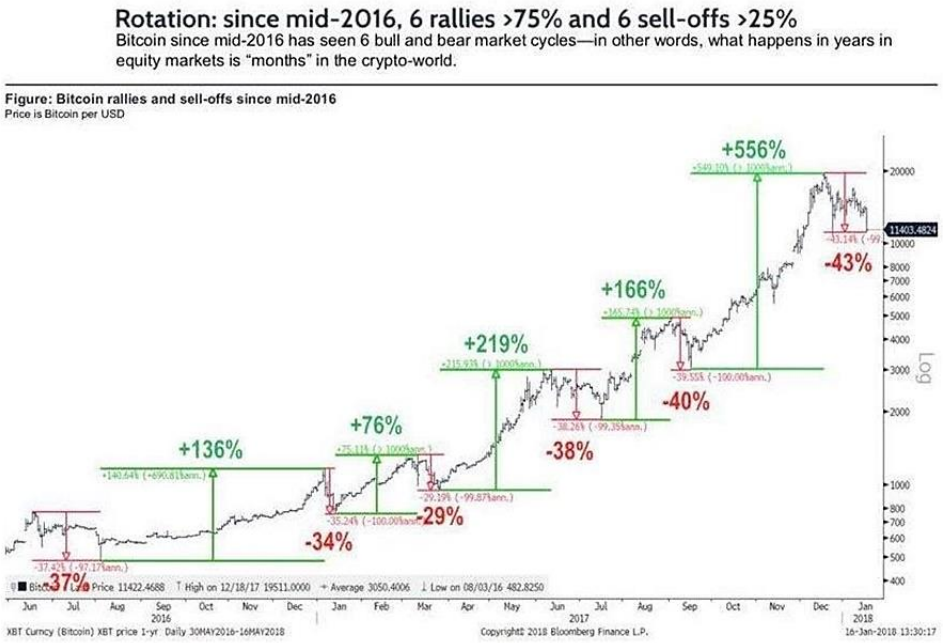

Chart 8: *Bitcoin rotation*

Source: Fundstrat

THE WORLD OF BLOCKCHAIN IS JUST SLOWLY HAVING THE GIANTS OF TRADITIONAL ECONOMIES JOIN IN:

Google

https://www.bloomberg.com/news/articles/2018-03-21/google-is-said-to-work-on-its-own-blockchain-related-technology

Facebook:

https://www.facebook.com/zuck/posts/10104380170714571

Mark Zuckerberg: "*There are important counter-trends to this --like encryption and **cryptocurrency** -- that take power from centralized systems and put it back into people's hands. But they come with the risk of being harder to control. **I'm interested to go deeper and study the positive and negative aspects of these technologies, and how best to use them in our services.**"*

THE TRADITIONAL FINANCIAL WORLD ISN'T AS STABLE AS IT MIGHT SEEM - FLASH CRASH

It also has to be pointed out that the traditional financial world isn't anywhere as stable as it might sometimes seem.

One example here could be Flash Crash:

Big banks' HFT (*High Frequency Trading*) trading automats:

HFT - High Frequency Trading are systems that make it possible for exchange players to make very quick transactions. They allow to beat those investors who don't use quick transactions to selling or buying. Currently they are mostly used by the biggest investment banks – such as JP Morgan or Goldman Sachs, but they keep growing in popularity.

On the biggest exchanges, HFT already generates more than 50% of revenue !

The results of using such automatons were perfectly presented by Flash Crash: the global traditional financial market completely crashed – died down – ceased to exist – for actually quite long judging by the scale of it.

The Wall Street Code: - the flash crash description starts at 33:47

https://www.youtube.com/watch?v=kFQJNeQDDHA&t=2228s&list=PL9RRb09iXKiMsXdY2B7d-3DcgfjQLFru0&index=4

*„Exchanges have changed from places where companies attracted investors to data centers where wars arranged between algorithms. They trade with each other at the speed of light. A hidden word where during a sudden implosion in 2010 flash crash **862 000 000 000 USD** evaporated within minutes on American stock markets."*

Chart 9: *Flash Crash*

Source: The Wall Street Code - (vpro backlight documentary - 2013)

About flash crash in Wikipedia:

https://en.wikipedia.org/wiki/2010_Flash_Crash

Once average people get a reflection and it dawns on them that over 50% of all revenue on Forex and traditional exchanges are HFT transactions and that 862 000 000 000 USD can vanish from the market in an instant, they will probably start to look at these things differently…

THE BLOCKCHAIN TECHNOLOGY IS A KIND OF INTERNET FOR THE WORLD OF FINANCE

The transformational potential of Blockchain technology **seems to be stronger than the Internet**. The Internet is a foundation for Blockchain technology activity. The blockchain technology use to all the possibilities and benefits of the mature solutions of Internet, with additional freedom using financial area.

The Blockchain technology is a kind of Internet for the world of finance.

The Internet has become a revolution that changed our entire economy so far. It could be expected right from its early days and our team went into Internet technologies at their early stage, the benefits of which are most noticeable to it today.

Not many people knew during the early stage of the Internet that it would be a revolution, those who noticed it first were the ones to benefit the most from it, quickly gaining experience in this new medium and continuing to successfully make use of it in the years to follow.

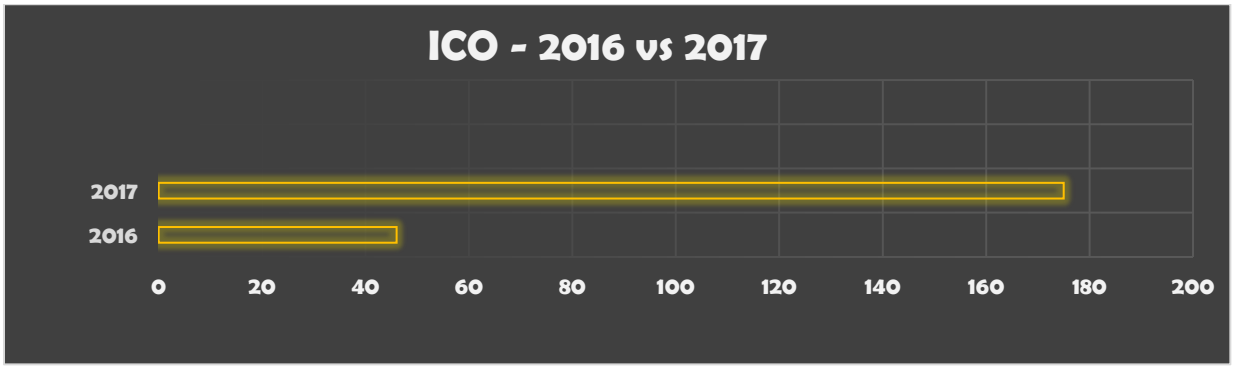
Blockchain is the Internet of the financial market. It can be seen even now that **it will be the next economic revolution** and our team is very sure of that, as for today on the other hand, not many people can see it, which makes it a perfect moment to invest in blockchain – before others fully notice its potential.

Even Warren Buffett (an investment guru) himself has a rule: „Buy gossips, sell facts". For now, only a relatively small group of people on a global scale can see the fact that blockchain is a global revolution comparable to the Internet.

ICO – NEW DIMENSION OF INVESTING

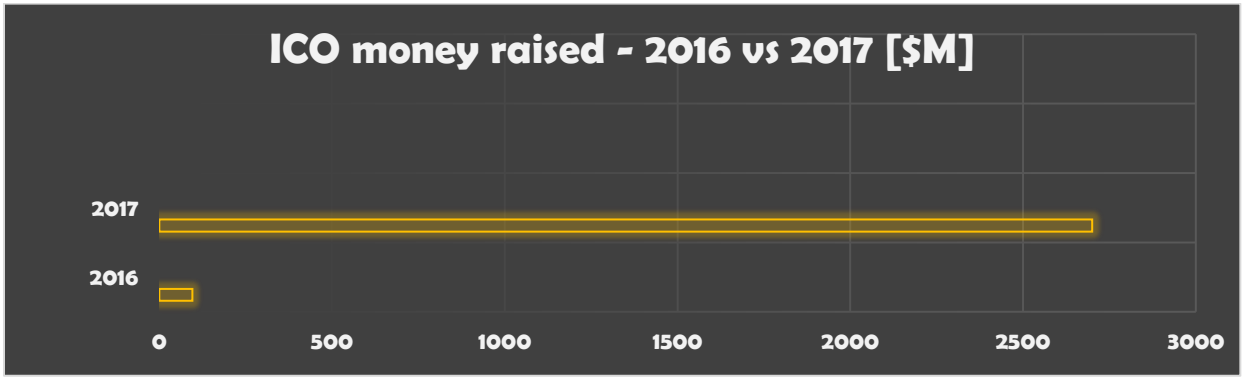
ICO MARKET

ICO (Initial Coin Offering) is a modern financial instrument based on crowdfunding and cryptocurrency. Investors after acquainting with the investment concept transfer funds in Bitcoins, Ethereum or other cryptocurrencies. In return, they receive digital assets with the probability of a high rate of return. ICO projects have gathered over $2B in 2017.



Charts 10: *Number of ICO projects 2016 vs. 2017.*

Source: https://coinmarkecap.com , https://cbinsights.com, https://coindesk.com



Charts 11: *ICO money raised (in $M) 2016 vs. 2017.*

Source: https://coindesk.com, https://coinmarkecap.com, https://cbinsights.com

28 x more funds were collected by ICOs in 2017 compared to 2016

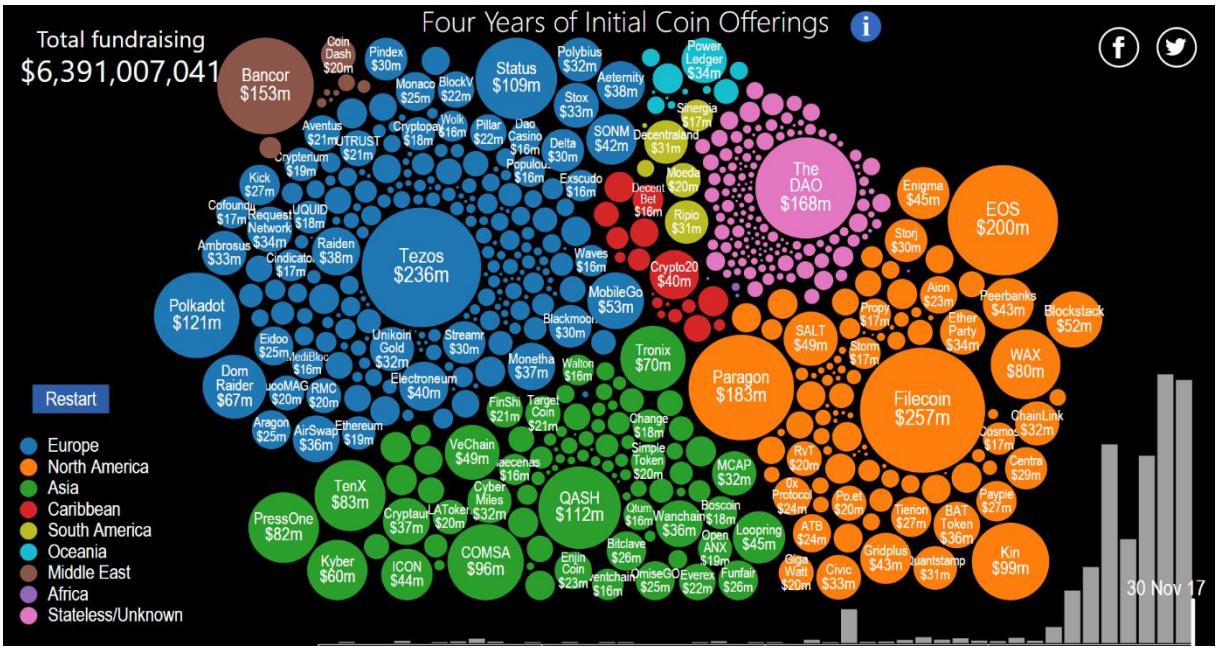
11 x increased total market capitalization of cryptocurrency

4 x more ICOs was established in 2017 than in 2016

The ICO market is growing at an exponential rate.

What it looked like in previous years is best summed up in this animation:

https://elementus.io/token-sales-history



Charts 12: Examples of ICOs with total fundraised.

Source: https://elementus.io/token-sales-history

In **Q1 2018**, ICOs have already gathered over **3 000 000 000 USD**, which is more than half of the funds collected in ICO over the **entire 2017**.

TOP ICO IN Q1 2018

Projekt	Zebrane środki (USD)
Telegram	> 1,000,000,000
Dragon Coin	> 320,000,000
Banke	> 150,000,000

Unfortunately, most of these projects **fail** or **do not reach the announced results** after collecting a specific pool of funds. This creates unpleasant implications not only for investors, but strongly undermines the credibility of all projects based on Blockchain.

Investors joining these projects **do not receive any guarantees** and are not able to predict whether they will not lose their money. On the other hand, more experienced investors have to do a lot of business analysis to assess project development prospects on their own, often without full spectrum of necessary skills.

In many cases, even thorough analyses are not able to protect potential investors from the high probability of losses, because there may always be something that is not obvious to them, such as legal issues related to the protection of intellectual property or the risk of project team burnout. An investor does not have experience in any industry and without complete investment experience is not able to predict all problems that may arise during investment in projects at an early stage of development.

All these inconveniences cut off a large group of investors who would like to potentially invest in a chosen project. ICO offers many opportunities, but it is a new investment model that has not been improved yet and has many imperfections:

1 DEFRAUDATION

ICO participants are deprived of the ability to control high-quality ICOs, they have no competence to perform due diligence.

2 LEGAL FRAMEWORK

Lack of unambiguous legal regulations for ICO, reporting standards harms startups, and investors.

3 UNAUDITED CONTRACTS

Many token contracts are not audited by a trusted authority, which favors the defraudation of digital assets.

4 OVERFINANCED PROJECTS

Many ICOs have an imprecise model of fund distribution, which results overfinanced by ICO participants, often also their misappropriation.

5 LACK OF TRANSPARENCY

Token holders do not receive reliable reports regarding the realization of the ICO assumptions.

6 LOW LEVEL OF TRUST

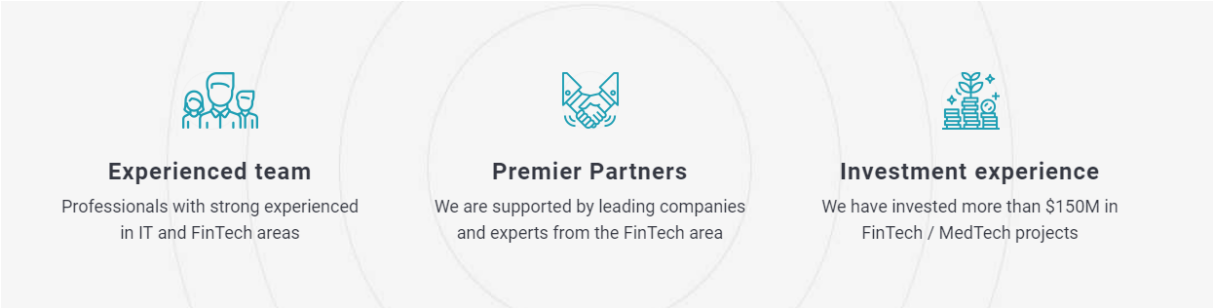
Investors joining an ICO do not receive any guarantees. Most projects are launched by a team with no investment experience.

ICO VS. CLASSIC VENTURE FUND

The requirement to join the classic venture capital fund is necessity to invest on the start of high amounts like hundreds of thousands of dollars. This policy of modern VC funds pushes to the margins millions of potential investors who are unable to fulfill this conventional condition.

Classic investment funds are more and more willing to join projects using new technologies. The well-known fund Fintech Blockchain Group (FBG) has already invested in over 20 ICO projects. Investors are tempted by the possibility of a very quick profit, in contrast to traditional investment in startups. Over $1.2B has already been invested in ICO, and interest in this type of investment is still growing. The funds that deal with cryptocurrencies are the most popular ones. Their value is estimated at over $2B.

Banks are afraid of risk from investment funds, because ICOs do not need to operate a traditional system of transfers. Instead of combating new solutions, banks invest considerable resources in keeping up with the changing reality. Seven largest European banks have invested in the development of the Blockchain network: Deutsche Bank, HSBC, KBC, Natixis, Rabobank, Société Générale and UniCredit.



WHAT TO PAY ATTENTION TO WHEN INVESTING IN ICO

Overall picture:

- 90% of ICOs are sadly a scam
- 1% will revolutionize the world
- It is already happening

The blockchain technology:

- Is it really made use of
- approx. 90% of ICOs are based on the ERC-20 Token Standard - Ethereum
- Open Source - GitHub
- The team's experience with programming

Tokens:

- Will it be possible to sell them at exchanges?
- What is the actual benefit of owning tokens

The team – a THOROUGH analysis:

- Actual experience
- LinkedIn, Facebook – a thorough analysis
- The number of contacts and their quality
- Recommendations – are there any and from whom

The team – the companies the team worked for – a THOROUGH analysis:

- Do these companies really exist
- What is their traffic – Google Analytics, Ahrefs, …
- Google – what can be found about a person – someone who's been in the industry for years usually has a lot to find about them

The project – a THOROUGH analysis:

- Unrealistic premises - ERC-20 can't do everything
- „Buzzword salad" – avoid projects you don't understand that seem to sound nice

"Our decentralized blockchain-based platform will disrupt the landscape of cryptocurrency investment while building a trustless network of pseudonymous users that leverage swarm intelligence technology to provide real world financial services in a tokenized ecosystem."

- Business - validity
- The website
- Whitepaper
- PoC (Proof of Concept) / MVP (Minimum Viable Product)
- The code repository
- The community
- Recommendation systems

ICO SPECIFICATION

Token: CRYPTON – CRN

Token Exchange Rate: 1 CRN = 1 USD

Technology CRN token is a cryptocurrency implemented through ERC-20 Token Standard technology of smart contract, based on Ethereum.

Total token supply: 72 000 000

Tokens for ICO: 50 400 000 (**tokens not sold will be burn**)

Pre-ICO bonus: 30%

Payment methods: BTC, ETH

Mining: No

Tokens lockups: **All the tokens of the fund founders and the team will be subject to a lockup for 2 years.**

WHY IS THE CRYPTON VC UNIQUE?

In 2017, our team which have experience in the classic Venture Capital investment market began looking for opportunities to invest in Blockchain-based projects. We found many interesting projects, but only a few of them were managed by experts from the venture capital market. We have decided to create a venture capital fund for the blockchain and cryptocurrency technologies.

Blockchain is the Internet of the financial market. We believe that it is a revolution that can completely change the financial market within the next 4-5 years, just like the Internet did it before. Then we came up with an idea to create a crypto venture fund. We called it CRYPTON VC.

Crypton VC connects a professional venture capital fund with the cryptocurrency market. This solution allows to become an investor in professionally managed Venture Capital fund. We're creating a venture capital fund that will collect investment capital through ICO.

Currently, the classical financial market is governed by very big entities that have existed on the market for a long time, they are not elastic, but have very high income, their stakes and markups are high, but they earn less than is technically possible. They don't use their abilities to their full potential. The Internet revolution allows for a much faster global flow of financial information than what is currently used (the time needed to carry out an international bank transfer today can be up to a week). On top of that, the blockchain technology supplements the current financial system with security on a much higher level than what bank systems offer. Luckily for us, most of major financial institutions still don't notice the huge technological and economical potential of the blockchain technology. Our team is in personal relations with managements of many banks. Most of them represent a very low level of knowledge when it comes to the blockchain technology and cryptocurrencies. This gives pretty much unlimited opportunities to develop for Crypton Venture Capital.

The CRYPTON team are experienced investors who have carried out investment processes for many years successfully. Thanks to the developed investment strategies and the ability to conduct in-depth analyses / due diligence, investors gain confidence that the investments carried out under Crypton team control are burdened with minimal risk, and the collected funds will not be misappropriation.

Crypton VC will invest in portfolio projects that will be continuously updated with new propositions and subject to voting in the DAO model by the Crypton investors.

We wish to create an entire financial ecosystem for this new type of economy – starting with an exchange, then a bank, a one-click safe payment system, an online deferred payment system based on our blockchain reputation, all the way to advanced mechanisms such as market indexes for cryptocurrencies or trading systems incorporating AI as well as arbitration systems on the cryptocurrency exchanges and finally, HFT (High Frequency Trading) mechanisms for the cryptocurrency market.

CLASSIC VC	Crypton VC
HIGH ENTRY BARRIERS The minimum investment is usually $100,000.	**LOW ENTRY BARRIERS** The minimum investment is only $1.
LONG INVESTMENT PROCESS Looking for investor takes between 6 and 12 months, which inhibits and complicates business development.	**FAST FUNDING** We analyze the profitability of the idea and market research in an efficient way. Projects that pass the analysis positively will be allowed to vote, which will last for 14 days.
EXIT FROM INVESTMENT The average time for return on investment is from 3 up to 7 years.	**FAST EXIT FROM INVESTMENT** Return on investment after only a few months. The CRYPTON token can be sold at any time on a stock exchange.
LACK OF CONTROL The investor has no influence on the investments selected by the fund's management.	**TRANSPARENCY AND CONTROL** Projects from the fund's portfolio will be forwarded to the vote on among CRYPTON token holders - we decide together which projects we will invest in.
LIMITED NUMBER OF INVESTORS	**UNLIMITED NUMBER OF INVESTORS**

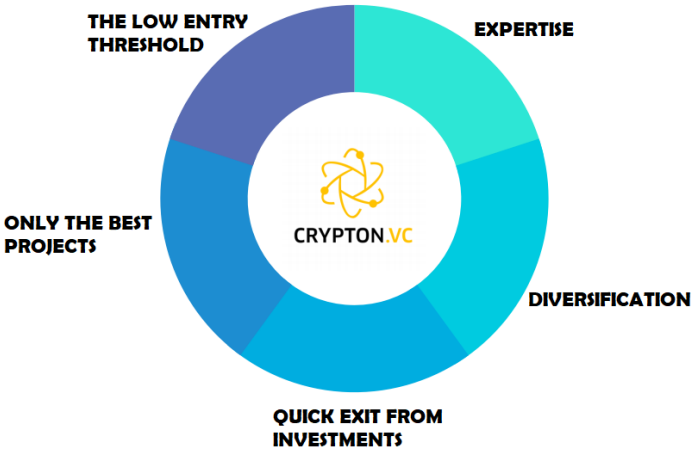
THE PILLARS OF THE CRYPTON VC

Our idea is to create a fund that is based on **three pillars:**

1. Venture Capital funds which operate in the classic model, usually accept only investors who are able to invest at least $100,000. Our solution allows you to participate in a professional fund, with the experienced staff and business angels, even if you have only $100 in your wallet - including the entire benefits package.

2. The investment market in Blockchain-based projects is developing very dynamically. Hundreds of new ideas appear every day. More and more projects are presenting really high quality together with attention to legal and security issues. On the other hand, it is still easy to find weak projects with dubious legality or credibility. Beginning investors with little experience have a real problem to properly assess the chance of a given project to succeed or fail. Our team has been dealing with every day for several years - we select breakthrough projects with high efficiency, and then we invest in them financial resources, time and experience.

3. Investments in classic Venture Capital funds or in startups require patience, because in order to receive the first profits, investors have to wait several years, until the project develops or will be sold. You can sell / replace CRYPTON tokens at any time or maximize your profits by waiting for the full implementation of the project. We provide professional advice for each project in our portfolio, so that projects have chance for reach maximum market value. It guarantees investors maximum income with minimal risk.



CRYPTON VC – ADVANTAGES FOR INVESTORS AND STARTUPS

ADVANTAGES FOR INVESTORS	ADVANTAGES FOR STARTUPS
The ability to control the projects which the fund will invest in	Quick and easy funding
High liquidity of CRYPTON token	The possibility of full focus on business development, not the looking for financing
Effective management of the token pool	Full control of the project management strategy
The minimum investment amount is $1. Access to a wider range of investment opportunities with a lower risk profile	A team of professionals surrounding the project, from the initial phase to the completion of the investment
Access to the experience of investment experts	Assistance in the implementation of legal and accounting procedures
Access to business reports / due diligence for ICOs available on the market	Access to the best specialists and consultants
Control of experienced investors over the investment	Full support of the business environment in the areas of IT, marketing, finance, law, …

CRYPTON VC COMBINES CONFIDENTIALITY AND DECENTRALIZED PROJECT MANAGEMENT WITH THE RELIABILITY OF THE LARGEST VENTURE CAPITAL FUNDS

OUR TEAM

The entire team of Crypton VC has been genuinely **cooperating together for years**, **forming a good team for many years now**.

COMPETENCES OF THE CRYPTON TEAM

- Verification and supplementation of key assumptions of invested projects in cooperation with project managers from these projects;
- Conducting a deep analysis and market verification for the projects from the portfolio of the fund, considered for investment;
- Searching for promising projects and ICOs and performing their thorough multi-criteria analyses;
- Support in launching ICOs for projects with tokenization options: finding investors, pre-financing, marketing activities, legal and organizational assistance;
- Elimination of too risky projects and selection of projects with maximum growth potential;
- Providing a transparent structure for investors;
- Ensuring intensive development of projects;
- Creating and maintaining synergistic services;
- Monitoring of acquisition and spending of funds as part of projects, supervision and mentoring in the implementation of projects in the Crypton fund;
- Providing our investors with a higher level of guarantees than ICOs carried out independently by project initiators.

OUR EXPERIENCE

- We are highly experienced FinTech professionals and investors.
- In total, we have invested over **$150M**, including **$2M** in projects related to Blockchain and cryptocurrency projects.
- We own **15+** FinTech companies.
- We have successfully completed over **50** investments mostly in FinTech area.
- We have invested together with: Wirtualna Polska (the largest internet portal in Poland, with a revenue of **$250M**, listed on Warsaw Stock Exchange with **$0.5B** market capitalization); Arteria S.A. (the largest capital group in business process outsourcing area in Poland with a revenue of $50M), T-mobile and many other companies.
- We have great experience gained in cooperation with: MasterCard, VISA, UBS, Oracle, Accenture, …

Capgemini ARTERIA SA T-Mobile

OUR AWARDS AND CERTIFICATIONS

- Honorable mention in the **Deloitte Technology Fast 50 ranking**.
- Winning the Dragon's Den competition for the best investment project.
- **Certified with PCI DSS** (Payment Card Industry Data Security Standard) – the highest security certification for the payment / FinTech systems.
- **MasterCard technology partner.**
- Acquirer Agent – an institution permitted to authorize and clear transactions using payment cards.

Patryk Liberda
Art Director

LinkedIn

Leader of creative teams at the intersection of design, branding and advertising. Partner to brands in uncovering their authentic core and communicating it to the world in engaging and relevant ways. He had developed visual design solutions and strategy for many clients including Canal+, El Electronics, NEPI Rockcastle and many more. Resourceful, strategic, passionate and collaborative integrated creative director & designer.

COMPANY

We have decided to start a dedicated fund company in Estonia, due to the country being favorable towards the cryptocurrency market and adequate legal regulations in this matter.

The company: Crypton Venture Capital OU

The address: Harju maakond, Tallinn, Lasnamäe linnaosa, Peterburi tee 47, 11415

As the company develops, it will gradually be expanded with subdivisions and representative offices around the world.

INVESTMENT STRATEGY

The primary goal of the CRYPTON VC is to create an opportunity where everyone all over the world, can make a really good investment, even if has only $1.

The main interest of the CRYPTON VC fund is FinTech projects at an early stage of development and cryptocurrencies that have the potential for exponential growth. We anticipate investing in one project at a level from $200,000 to $1,000,000. We will also invest in other, well-promising projects ICOs, following their in-depth multi-criteria analyses.

The Crypton fund will invest in technologically advanced startups in the area of FinTech and Blockchain as well as other ICO / cryptocurrencies. For the projects from the defined portfolio that have characteristics of tokenization, we predict conducting a separate ICO. **Owners of Crypton tokens will be given extra tokens from a defined pool of every subsequent ICO conducted within the scope of the fund.**

We will invest in projects at the conceptual stage or ones with a functional MVP. **We focus on projects that can have their business attractiveness quickly verified.**

We are able to and intend to comprehensively support carrying out projects from the investment portfolio, we share our business and investment knowledge. We are inherently capable of making available an entire ecosystem: from IT, to HR, finances, law, trade and marketing, so that the team doesn't waste any time building this structure, as it usually takes a lot of time.

These resources will not be made available to the investment projects for free, but they will be offered at attractive market prices. Every management team of a project will be able to decide on their own whether they want to use the available infrastructure or create their own from scratch.

Thanks to that, the originator can focus on the business development right away. This model is pretty much never used in other VC funds. Our investment experience says that it works out very well and cuts the time required for an investment project's market start even by half.

THE BASE PREMISES FOR CARRYING OUT A PROJECT IN THE FUND'S PORTFOLIO

1) Before starting to carry out a project, the preincubation phase will be performed, which envisions the following: specifying the scope of the project and assignation of the MVP, thorough competition analysis (globally), market analysis, creating a business plan, estimating the costs and the work schedule as well as defining KPIs (Key Performance Indicators) that have to be fulfilled for the MVP version.

2) Providing a full investment support and business environment to carry out the MVP for the portfolio projects: IT, marketing, sales, law, accounting, … That way the people in charge of the project will be able to entirely focus on developing the business and on the market verification of the product.

3) Quickly launching the MVP (Minimal Valuable Product), which will allow to verify the actual market demand for a particular product. The estimated time for preparing and launching the MVP is, depending on the project, a period of 3 to 6 months.

4) Then MVP market tests will be conducted, not only locally, but also on selected global markets (1-3 months).

5) After the MVP market tests, verification of accomplishing the expected KPIs and decisions on further development of the project in its full version.

- CRYPTON VC is a professional team with venture capital investment experience in projects in the FinTech / Blockchain area.
- We have experience in the area of FinTech, which underlies the idea of cryptocurrencies: we have a team of 250 FinTech experts, many FinTech companies and many successful investments in FinTech projects.
- We present defined, professional portfolio of FinTech / Blockchain investment proposals.
- We will invest in other ICOs, but after deep, multi-faceted analyses.
- Quarterly payment of dividends in the form of token purchases by Crypton fund.
- Regular proposals for new investments and submission to vote on among Crypton token holders.

DIVERSIFICATION OF INVESTMENTS

In the traditional business angel investment model, the investor's success depends entirely on the successful development of the project in which the fund has invested. In the investment model of the CRYPTON VC fund, CRYPTON tokens purchased simultaneously, invest in the entire investment portfolio of the fund, and their value is divided among several projects, minimizing the risk of losing funds, thanks to independent investments.

40 percent

of collected funds will be invested in defined portfolio of Crypton projects.

40 percent

of collected funds will be invested in other ICOs / cryptocurrency after fundamental analysis and due diligence.

The remaining 20% of the collected capital will be allocated to:

1) the team involved in Crypton fund – analysts, traders, designers, project managers, lawyers, accountants, industry specialists, IT / blockchain specialists, …

2) building an ecosystem that supports ongoing investments – we aim for a comprehensive support of carrying out the projects from the investment portfolio, we wish to make available an entire ecosystem: from IT, to HR, finances, law, trade and marketing, so that the team doesn't waste time building this structure on their own from scratch, as it usually takes a lot of time.

These resources will not be made available to the investment projects for free, but they will be offered at attractive market prices. Every management team of a project will be able to decide on their own whether they want to use the available infrastructure or create their own from scratch.

Thanks to that, the originator can focus on the business development right away. This model is pretty much never used in other VC funds. Our investment experience says that it works out very well and cuts the time required for an investment project's market start even by half.

3) Marketing, Reserve

STRONG SIDES OF THE CRYPTON INVESTMENT STRATEGY

DEFINED PORTFOLIO OF PROJECTS

Our team has experience gained over years of good practice, regarding the management and development of the start-up project portfolio. Investors (Crypton token holders) will not be required to conduct independent analyses of investment projects. Analyses and research will be carried out by a professional team of business analysts, and available on the CRYPTON VC fund platform.

1 CRYPTON TOKEN = MULTIPLE INVESTMENT BENEFITS

Each investor will be a shareholder in all projects, in which the CRYPTON fund will invest in the future. Crypton token holders will automatically receive digital assets in each of the next startups and ICOs.

LOW ENTRY THRESHOLD

There is no need to be a venture capital investor to participate in the most promising projects; you can participate in developing projects that you consider promising, even with small investments, thanks to crowdfunding, using cryptocurrencies.

QUICK EXIT FROM INVESTMENT

The average investment period for venture capital projects is 5-7 years. We invest in projects at the earliest stage, when they show maximum growth. This period for various projects lasts from few months up to 3 years.

HIGH LIQUIDITY OF CRYPTON TOKEN

The Crypton tokens will be issued to the stock exchanges in the first months after ICO, with the possibility of free sale. The payment of the dividend will be made in the form of buying up part of the CRYPTON tokens, which will transfer into an increase in the value of rest Crypton tokens held by investors. We will also issue Crypton tokens on our stock exchange – CryptonEX.

30% of the profits will be distributed among the Crypton token holders via a Crypton tokens buy-back process. In this way, distribution of income drives liquidity of the Crypton tokens.

For 30% of the Crypton profits, we will buy-back Crypton tokens from exchanges, and price of rest of the tokens will automatically increase.

DYNAMIC INCREASE OF CRYPTON TOKENS VALUE

The value of tokens will increase with the increase of the fund's investment portfolio and after each project sale - where the fund will obtain a net profit. Selected projects from the portfolio will be launched by ICO, and a specific pool of tokens from these ICOs will be transferred to Crypton token holders.

A FRIENDLY FUND STRUCTURE

We rely on the principle that both, fund team and investors receive profits from market successes. Our common goal is to achieve high return on investments. Projects selected by us after in-depth analyses will go to the voting platform, where quorum of investors (Crypton token holders) will choose projects which we will invest in together.

METHODOLOGY OF ANALYSIS OF OTHER ICO - OUTLINE

Overall picture:

- 90% of ICOs are sadly a scam
- 1% will revolutionize the world
- It is already happening

The blockchain technology:

- Is it really made use of
- Approx. 90% of ICOs are based on the ERC-20 Token Standard - Ethereum
- Open Source - GitHub
- The team's experience with programming

Tokens:

- Will it be possible to sell them at exchanges?
- What is the actual benefit of owning tokens

The team – a THOROUGH analysis:

- Actual experience
- LinkedIn, Facebook – a thorough analysis
- The number of contacts and their quality
- Recommendations – are there any and from whom

The team – the companies the team worked for – a THOROUGH analysis:

- Do these companies really exist
- What is their traffic – Google Analytics, Ahrefs, …

- Google – what can be found about a person – someone who's been in the industry for years usually has a lot to find about them

The project – a THOROUGH analysis:

- Unrealistic premises - ERC-20 can't do everything
- „Buzzword salad" – avoid projects you don't understand that seem to sound nice

"Our decentralized blockchain-based platform will disrupt the landscape of cryptocurrency investment while building a trustless network of pseudonymous users that leverage swarm intelligence technology to provide real world financial services in a tokenized ecosystem."

- Recommendation systems

INVESTMENT TRANSPARENCY

Each investment project will be thoroughly analyzed and the results will be consulted widely with Crypton investors, then the project will be voted on the Crypton investment platform.

Each project from our own projects' portfolio will receive a managing partner from an external industry entity of a given sector, who will have the full right to block the activities of the Crypton fund which they consider undesirable. As the partner will also invest their own resources in the project / involve their own team, it guarantees that they will care about the implementation, not less than the investors of the Crypton fund are.

An independent project management team will be established for each project. The designated team will be fully responsible for the project and supervised by the Crypton fund and its investors.

Each investment project will be thoroughly analyzed in accordance with the investment policy before the implementation, the MVP and KPI framework will be also set up.

Only the complete fulfillment of KPI framework of the implemented MVP will give the right to continue the project on a full scale.

DAO MECHANISM

The operation of Crypton fund will be based on DAO (Decentralized Autonomous Organization) mechanisms.

In Crypton investment model DAO is form of investor-directed venture capital fund.

The DAO mechanism will allow holders of Crypton tokens to actively participate in the running of the fund.

It is the holders of tokens that will decide by voting in what the fund invests, under what conditions, and they will also decide when the fund leaves the investment and at what rates of return.

Each token has 1 vote in voting on investment projects, the more the investor has tokens, the more votes he has. This is a very good mechanism, because the more someone has invested in Crypton and has more tokens, the more it will be important for him, that the fund's investments be good and give the best results.

Applying the advantages of the DAO model in the Crypton fund will help reduce the risk of investment errors, as a larger group of experienced investors will jointly make more accurate and more thoughtful investment decisions.

Each of the investors within each investment project will be able to submit his comments, proposals, objections and exchange experiences and thoughts with other fund investors. The Crypton team will be the executive branch that will execute the strategies voted on the platform by Crypton investors.

The Crypton team **will take what is best from the DAO model, but it will not leave the fund's entire operation to the automated mechanism**, because venture capital investments also require human commitment and implementation of the strategies voted for in the DAO model by the Crypton team.

However, we will strive to automate processes in the DAO model wherever it will be for the benefit of the fund, i.e. at the end for fund investors.

The Crypton platform provides in the DAO model tools for investment portfolio structuring and management, as well as a holistic view of the available investment opportunities, and the fund's historical and current investment performance.

The interface will allow the investor to:

- Partner's dashboard with projects detailed analyses, financial information, return on investments (ROI), information on dividend payments, detailed information about tokens from ICO portfolio projects.
- Access to projects subject to current analyses and due diligence.
- Ability to review and comment of projects.
- A transparent set of reports showing the distribution of funds, the progress of projects and the operation of the fund.
- Access to vote on subsequent investment proposals.
- Access to vote on exit from investment proposals.
- Submit tokens for buy-back to participate in the distribution of the fund's revenue.
- Download reports and export necessary analytical data.
- Track the portfolio performance.
- The possibility to contact and exchange experiences with other Crypton investors. If anybody wants, he can also become anonymous within the Crypton investment platform, while for other people it will give the opportunity to contact, exchange experiences, consult between them Crypton investment strategies, free contact with each other.

STEP 1 – SELECTION OF INVESTMENT

The market of FinTech / Blockchain / ICOs projects

1 Searching for investment candidates

EXECUTIVE TEAM

- Look for investment candidates
- Analysis of investment proposals
- Presentation of investment recommendations

2 Presenting investment candidates

3 Rating investment candidates

BOARD OF INVESTORS

- Submission of additional project analyses
- Evaluation of recommendations for investments presented by the Executive Team
- Define the Smart Money that the Board of Investors can bring to itself

CRYPTON PARTNERS – CRYPTON TOKEN HOLDERS

- Access to the results of investment proposal analyzes
- Possibility to present your opinions and expertise to consult with Executive Team and Board of Investors
- Participate in the vote over investments candidates, while the required quorum for investment acceptance

STEP 2 – INVESTMENT SUPERVISION

EXECUTIVE TEAM

- Periodic inspections of the investments
- Create report from the completed investment control
- Consult of planned activities with the Board of Investors

1 Report from the completed investment control

2 Rating of the report from investment control

BOARD OF INVESTORS

- Possibility of review of the planned activities and presenting recommendations for changes to the adopted plan

STEP 3 – EXIT FROM INVESTMENT

BOARD OF INVESTORS

- Rate recommendations for exit from investments which was presented by the Executive Team

1 Presentation of the candidates projects to exit from investment

2 Rating of the candidates to exit from investment

EXECUTIVE TEAM

- Present candidates for exit from investment including the rate of return and other investment parameters

3 Presenting proposals to exit from investments

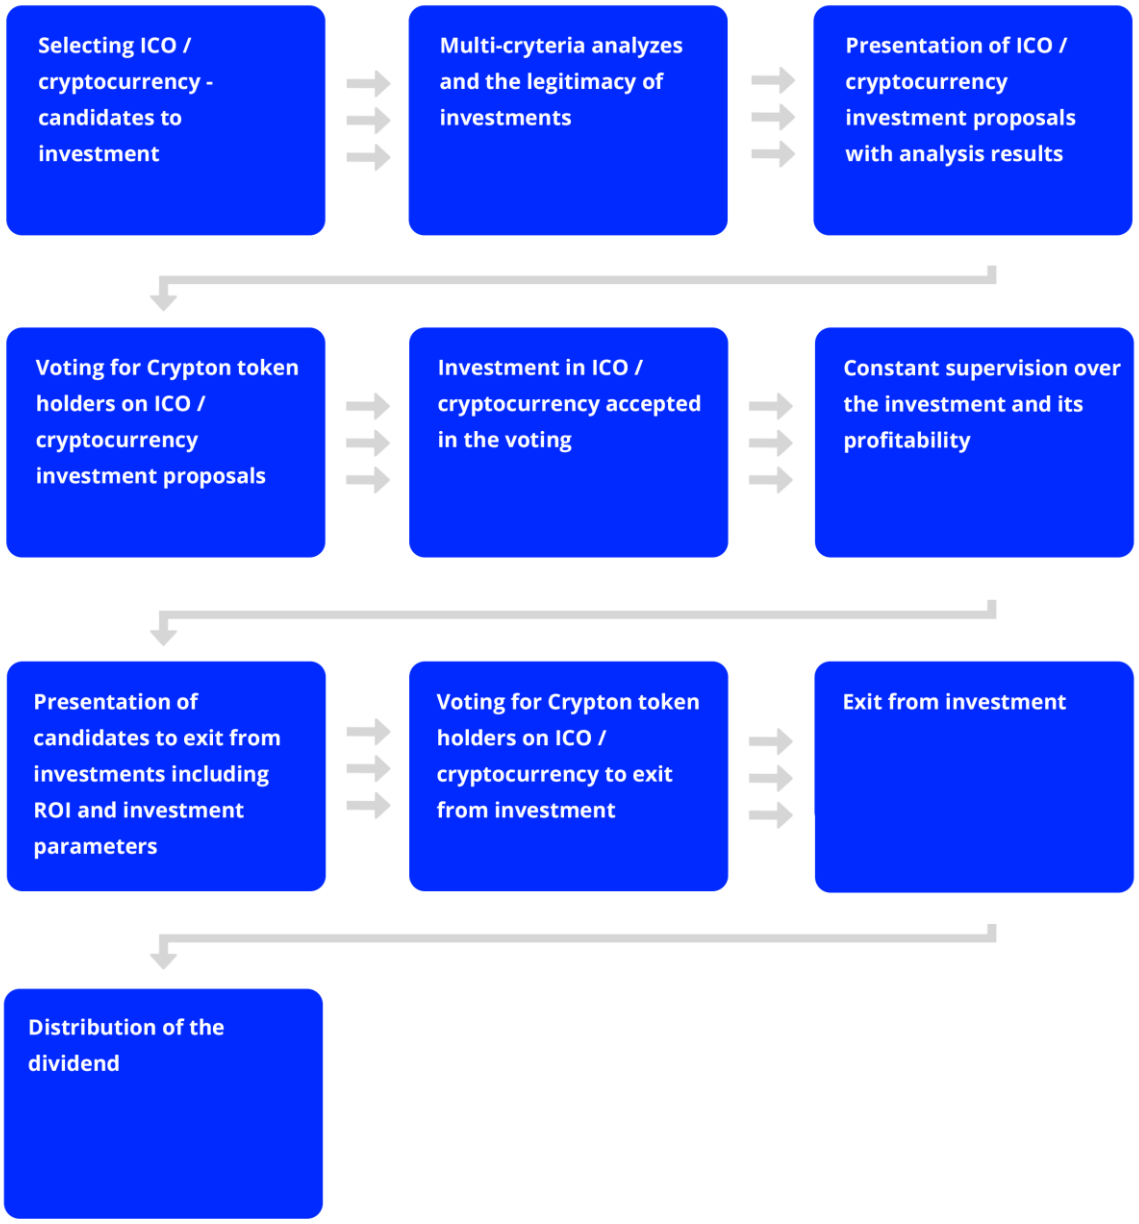
CRYPTON PARTNERS

- The opportunity to get acquainted with the proposals of exit from investment, together with ROI and other investment parameters
- The opportunity to present your opinions and expertise to consult with the Executive Team and Board of Investors
- Participate in the vote on the proposals of exit from investment, while maintaining the required quorum for acceptance the exit from the investment

INVESTMENT PROCESS

PROJECTS FROM CRYPTON PORTFOLIO

OTHER ICOS / CRYPTOCURRENCIES



ANALYSIS OF INVESTMENTS

The project analysis will consist of several phases, where the number of concepts assessed will be gradually limited. The entire process will be divided into a general assessment, and a detailed assessment. The most important criteria used to select projects for the fund's portfolio are: **team**, **product**, **market** and **finance**.

In the first stage, as a result of receiving a large number of applications, an acute selection will be carried out, however, in such way we minimize the risk of eliminating projects that could bring high income.

PRINCIPLES OF DETAILED ANALYSIS

- Maintaining a good reputation and inflow of funds in the future by ensuring a proper capital increase;
- Objective assessment of overly optimistic projects;
- An assessment of the startup's weak points in order to find out where the most help is needed;
- Making a decision about investment conditions;

The project development plans will be reviewed and evaluated by the team of professional fund analysts.

THE SUBJECT OF DETAILED ANALYSIS WILL INCLUDE, AMONG OTHERS:

- The quality of the project management team and the possibility of implementing an innovative project;
- The nature of the product in terms of its modernity, technological problems related to its production;
- Market potential and prospects for its growth, with particular emphasis on the possibilities of developing a new generation of products and entering foreign markets;
- Project financing method based on own and foreign capital;

Method used to decide on the selection of projects to be presented on the fund quorum, will be a **comparison** and **assessment** of the **strengths** and **weaknesses** of the project.

INVESTMENT RISK MANAGEMENT

The mission of risk management is to ensure that all basic risks accompanying the operations of the CRYPTON VC Fund will be correctly measured, reported and controlled, to ensure the implementation of the financial schedule and maximize the investment result at the approved level of investment risk. The risk management system will meet the best standards in the field of asset management and capital investment.

THE RISK MANAGAMENT SYSTEM WILL COVER:

- **Identification of the risk** in defined areas and sub-areas of activity in relation to the objectives and tasks carried out as part of individual processes - identification of risk includes determination of risk factors, risk in relation to the strategic objective;

- **Risk assessment and hierarchy**, according to the probability of risk occurrence and the degree of impact (effect of risk) - on this basis the level of risk is determined;

- **Risk response** are planned with respect to the strategic objective / operational objectives / tasks, taking into account the risk factor, risk and risk level, the risk response, the deadline, and the risk owner;

- **Monitoring the implemented measures** and assessing their effectiveness - as part of risk monitoring, the risk owner is responsible for eliminating / minimizing the identified risk. Risk identification and assessment is performed at the level of identified areas affecting the achievement of the strategic objective.

SWOT ANALYSIS

The CRYPTON VC fund can compete in a highly competitive sector of venture capital and capital trading.

STRENGHTS:

- Confirmed investment experience in the FinTech / Blockchain area
- Experienced executive team and advisors (with documented track record)
- Defined investment portfolio
- Carefully developed investment model and budget draft
- Support for the business environment for financed projects in the areas of IT, marketing, finance, law, …
- Experience in IT and strong technological support (more than 150 programmers)
- Guarantee of exit from investment in the short term
- Diversified investment risk

CHANCES:

- A prospective market area: FinTech / Blockchain
- Transparent, professionally organized ICO for the VC fund
- Decentralized investor community

WEAKNESSES

- A new venture capital fund in the FinTech area
- Low initial capital

THREATS:

- Market response to projects related to new technologies
- Competition from other VC funds
- Lack of confidence on the part of the investment environment due to embezzlement of funds by other ICOs

CRYPTON TOKENS

Take advantage of this unique opportunity to become a professional venture capital investor, joining an ICO as a Crypton VC partner!

The CRYPTON tokens are diversified by the entire pool of CRYPTON VC portfolio projects, two of them have already prepared MVPs (Minimum Valuable Product). The CRYPTON tokens value are related to the market value of all projects which the CRYPTON fund will invest in.

1 CRYPTON TOKEN = MULTIPLE INVESTMENT BENEFITS

Each investor will be a shareholder of tokens in all projects which the CRYPTON fund will invest in the future. Crypton token holders will automatically receive digital assets (tokens) in each of the next startups and ICO.

DYNAMIC INCREASE THE VALUE OF THE TOKEN

The value of tokens will increase with the increase of the fund's investment portfolio and after each start-up sale, where the fund will obtain a net profit. The selected projects from the portfolio will be launched ICO and 30% of tokens from the pool of these ICO will be transferred to Crypton token holders – absolutely for free!

In each ICO portfolio, 30% of tokens will be distributed to CRYPTON VC fund investors according to the appropriate proportion.

0,3 *x* y

x – the total pool of tokens in the portfolio ICO

y – percentage of Crypton tokens held in the fund

CASE STUDY

If the pool of issued tokens in ICO X is 30,000,000 and the CRYPTON token holder has tokens in the 0.05% share, it will receive a proportionate 4,500 ICO X tokens.

BENEFITS FOR CRYPTON TOKENS HOLDERS

- The **Crypton tokens will be issued** to the **stock exchanges** in the first months after ICO**, with the possibility of their free sale or buy.**

  We are in talks with cryptocurrency exchanges and some of them are very interested in issuing Crypton tokens on their exchanges.

- **Quarterly payment of the dividend** - will be distributed among the Crypton token holders via a buy-back process.

  30% of the profits will be distributed among the Crypton token holders via a Crypton tokens buy-back process. In this way, distribution of income drives liquidity of the Crypton tokens.

  For **30%** of the Crypton profits, we will buy-back Crypton tokens from exchanges, and price of rest of the tokens will automatically increase.

- **Receipt 30% of tokens from running ICOs for portfolio projects.**

  30% of tokens from fund projects ICOs will be allocated proportionally to Crypton token holders without any additional fees.

- **Access to exclusive Pre-ICOs with high discounts.**

- **The right to vote on subsequent investment proposals.**

- **The possibility of active participation in the fund through the Crypton investment platform:**

  The Crypton platform provides in the DAO (Decentralized Autonomous Organization) model tools for investment portfolio structuring and management, as well as a holistic view of the available investment opportunities, and the fund's historical and current investment performance.

  The interface will allow the investor to:

  - Partner's dashboard with projects detailed analyses, financial information, return on investments (ROI), information on dividend payments, detailed information about tokens from ICO portfolio projects.
  - Access to projects subject to current analyses and due diligence.
  - Ability to review and comment of projects.
  - A transparent set of reports showing the distribution of funds, the progress of projects and the operation of the fund.
  - Access to vote on subsequent investment proposals.
  - Access to vote on exit from investment proposals.
  - Submit tokens for buy-back to participate in the distribution of the fund's revenue.
  - Download reports and export necessary analytical data.
  - Track the portfolio performance.
  - The possibility to contact and exchange experiences with other Crypton investors. If anybody wants, he can also become anonymous within the Crypton investment platform, while for other people it will give the opportunity to contact, exchange experiences, consult between them Crypton investment strategies, free contact with each other.

- **The possibility of additional individual investments in selected Crypton project projects.**

Starting from Q4 2018

30% of the profits will be distributed among the Crypton token holders via a buy-back process. In this way, distribution of income provides liquidity of the fund's tokens.

70% of the profits will be reinvested to multiply the return to the investors.

TOKENS DISTRIBUTION

From the full pool of issued: **72 000 000** Crypton tokens, **20%** tokens will be available for sale in Pre-ICO and **50%** in ICO (70% of tokens will be released for sale).

The rest of **30%** tokens will be distributed between:

- Founders and team (10%)
- Advisors (5%)
- Bounty Campaign (3%)
- Token bonus 30% in Pre-ICO (6%)
- Token reserve (6%)

Chart 13*: Tokens allocation*

TOKENS LOCKUPS

All tokens of the founders of the fund and the team will be covered by a lockup for 2 years.

This means that for 2 years after issuing the tokens, the founders and team tokens cannot be sold. This guarantees a very large commitment of the founders and team in the operation of the fund and in the efforts to increase the value of tokens.

Lockup of the fund founders and team tokens is stored in a smart contract issued to the blockchain and cannot be removed by anyone in any way.

The lockup mechanism is commonly used in the issue of shares on traditional exchanges for IPO (Initial Public Offering), in the world of cryptocurrencies it is less widely used and we intend to set a good example to follow for other ICO's.

CRYPTON TOKEN ON EXCHANGES

It is an absolute priority for us to take care of issuing our tokens at the stock exchanges straight after ICO.

At this point, we have already started talks with stock exchange companies and these will be intensified during ICO.

At the moment we are conducting main conversations with **BitBay - the no. 1 cryptocurrency market in Europe.**

The Crypton Venture Capital CEO knows the BitBay CEO personally, which we hope will make the communication easier.

As of today (03.2018) BitBay CEO Sylwester Suszek, said he has a strong intention to issue Crypton tokens on the BitBay stock exchange and would like to proceed immediately after completing ICO Crypton.

During ICO we will intensify our talks with stock exchange companies and make sure that Crypton tokens are available around the world - this is our priority and we will not rest until we achieve it.

Crypton tokens will also be available on our own stock exchange from fund portfolio projects - CryptonEX - works on the construction of the exchange will begin around Q3 2018 and thanks to the large support of the external entities, we optimistically assume that they will be completed in Q4 2018. Operating of Crypton tokens on CryptonEX will be an absolute priority and will be implemented in the first stage and therefore immediately available on the market.

DISTRIBUTION OF THE FUNDS' COLLECTED

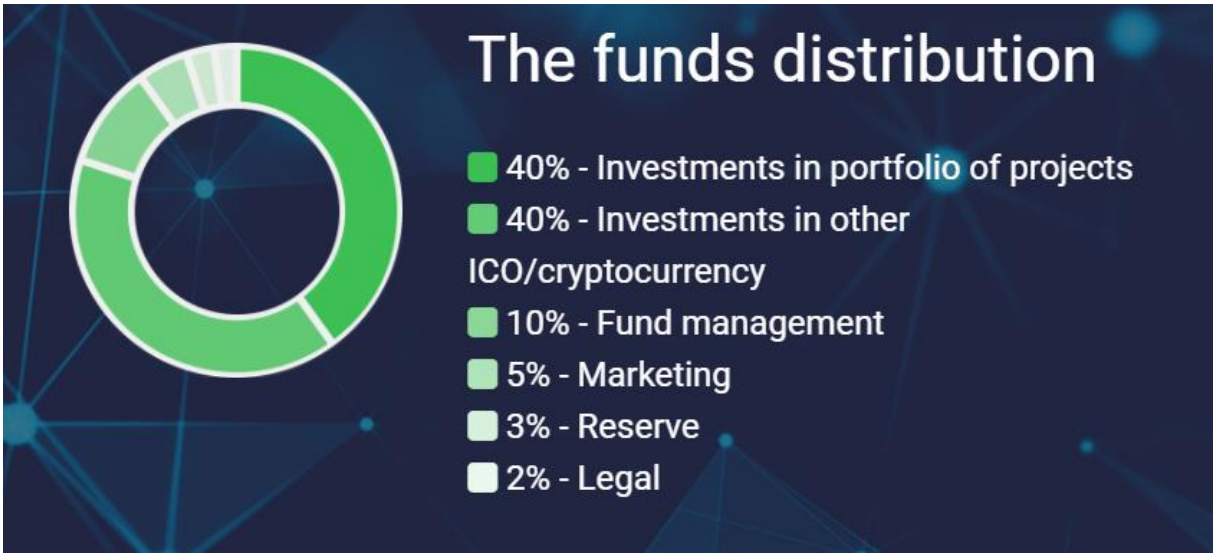


Chart 14: *The funds distribution*

40% of collected funds will be invested in defined portfolio of Crypton projects.

40% of collected funds will be invested in other ICOs / cryptocurrencies after fundamental analysis and due diligence.

The remaining 20% of the collected capital will be allocated to:

1) the team involved in Crypton fund – analysts, traders, designers, project managers, lawyers, accountants, industry specialists, IT / blockchain specialists, …

2) building an ecosystem that supports ongoing investments – we aim for a comprehensive support of carrying out the projects from the investment portfolio, we wish to make available an entire ecosystem: from IT, to HR, finances, law, trade and marketing, so that the team doesn't waste time building this structure on their own from scratch, as it usually takes a lot of time.

These resources will not be made available to the investment projects for free, but they will be offered at attractive market prices. Every management team of a project will be able to decide on their own whether they want to use the available infrastructure or create their own from scratch.

Thanks to that, the originator can focus on the business development right away. This model is pretty much never used in other VC funds. Our investment experience says that it works out very well and cuts the time required for an investment project's market start even by half.

3) Marketing, Reserve

CRYPTON INVESTMENT PLATFORM

The Crypton platform provides in the DAO (Decentralized autonomous organization) model tools for investment portfolio structuring and management, as well as a holistic view of the available investment opportunities, and the fund's historical and current investment performance. The interface will allow the investor to:

- Partner's dashboard with projects detailed analyses, financial information, return on investments (ROI), information on dividend payments, detailed information about tokens from ICO portfolio projects.
- Access to projects subject to current analyses and due diligence.
- Ability to review and comment of projects.
- A transparent set of reports showing the distribution of funds, the progress of projects and the operation of the fund.
- Access to vote on subsequent investment proposals.
- Access to vote on exit from investment proposals.
- Submit tokens for buy-back to participate in the distribution of the fund's revenue.
- Download reports and export necessary analytical data.
- Track the portfolio performance.
- The possibility to contact and exchange experiences with other Crypton investors. If anybody wants, he can also become anonymous within the Crypton investment platform, while for other people it will give the opportunity to contact, exchange experiences, consult between them Crypton investment strategies, free contact with each other.

PORTFOLIO OF INVESTMENT PROPOSALS

Our goal is to invest from 4 to 8 new Blockchain / FinTech projects per year.

We are currently monitoring over 50 interesting projects.

Proposals for further investment projects of the fund have been presented in the portfolio below.

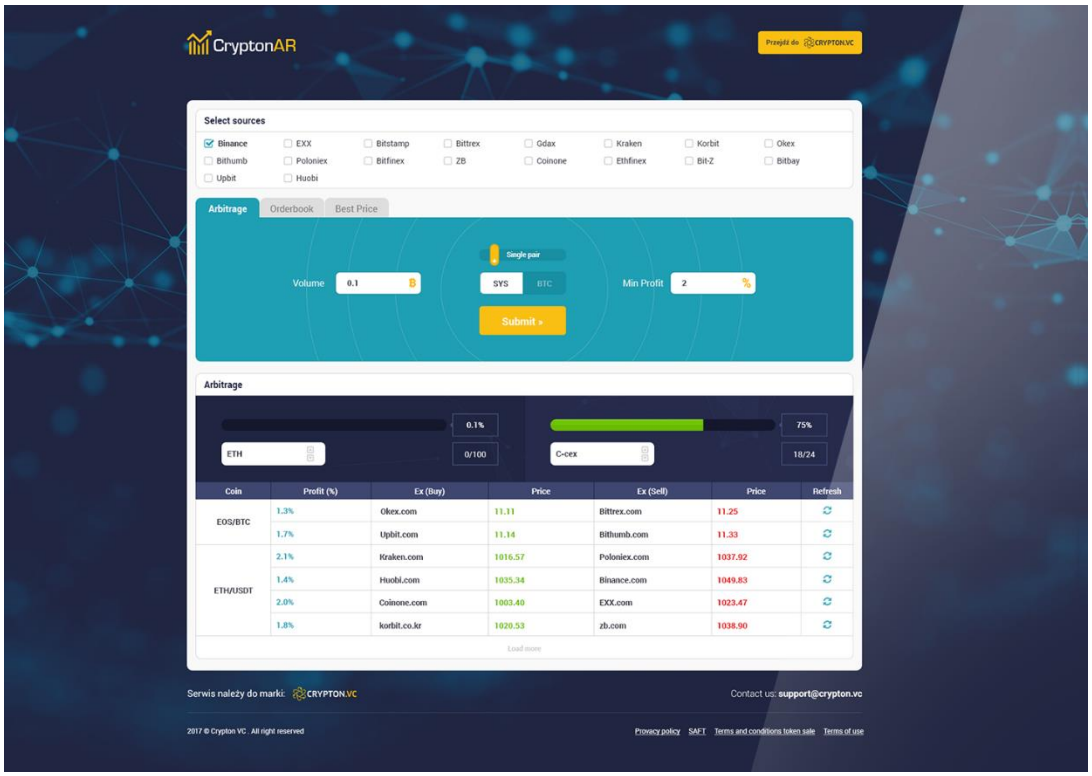
CryptonAR – arbitrage system for cryptocurrency market

The cryptocurrency arbitrage system CryptonAR can buy cryptocurrencies on the cheapest exchange rate and then sell them with exchange rate of the highest price – generating profits on the exchange rate differences between cryptocurrency stock exchanges.

Each cryptocurrency exchange is characterized by internal demand and supply to cryptocurrencies, which causes that cryptocurrency prices differs between exchanges. The fluctuations in the cryptocurrency rates also affect the price difference between exchanges. Cryptocurrencies, unlike traditional currencies, are characterized by very high dynamics of price volatility, which is why they are an ideal market for applying arbitrage mechanisms.

Differences in cryptocurrency prices between exchanges can be up to several percent, and there are even cases where the price of cryptocurrencies varies by as much as several dozen percent. Such cases are favored by sudden fluctuations in the cryptocurrency rates. The CryptonAR project is implemented jointly with a large hedge fund, which has many years of experience in arbitrage on the Forex market and successes in arbitrage on the cryptocurrency market.

In order to ensure a fully operational operation of the CryptonAR system, many factors were taken into account, including, inter alia: commissions charged by cryptocurrency exchanges, cryptocurrency transfer speed between exchanges and the risk related to depositing funds on too small quantity of exchanges - cash management.



The CryptonAR system supports over $0.5M a day, which is used for arbitrage transactions. Rates of return from those transactions on cryptocurrency markets can reach as much as 500% per annum, which compared to regular investment funds or bonds (usually couple % return rate per annum) creates a very attractive investment opportunity. Currently system generates refund rates often ranging from 0.5% to 19% per day.

In the, available for general use, CryptonAR system transactions of up to 50 USD profit per transaction will be made available, the remaining (> 50 USD profit per transaction) will be served by the Crypton fund - Crypton fund will earn on these transactions, and Crypton token holders will receive Crypton's Venture Capital dividend yield.

The CryptonAR project is being implemented in cooperation with a large hedge fund.

Market start: Q3 2018

Assumed profitability 100 - 500% per year

Investment status: The project is being implemented (MVP phase)

Seed round: Investment at level of $ 100 000

Required investment: $ 1 000 000

Implementing the CryptonAR system

Step 1 – Recommendation system (in development)

Creation of an automatic recommendation system for transactions between cryptocurrency markets in relation to a specific cryptocurrency. The system compares the stock exchange with the lowest price of a given cryptocurrency with the stock exchange where this price is the highest together with information about the expected rate of return including transaction costs for each of these exchanges.

Step 2 – Increasing the number of cryptocurrency markets (in development)

Initially, stock exchanges with API will be added, which will facilitate integration with the system. In the next steps, cryptocurrency markets that do not have an API will be included, but they will require support that simulates human activity.

Step 3.1 – Statistics / Outcome module

Collecting data and generating daily and cumulative statistics for a given period of time:

- the status of an account per currency and cryptocurrency - the state at the opening of the day

- the status of an account per currency and cryptocurrency - the status at the close of the day

- the sum of these states

- daily profit / loss total

- division per trader

- ...

Step 3.2 – Cash Management

In the third stage, Cash Management will be automated so that the system itself will control the amount of funds on a given exchange and after exceeding the set % limits, it will send alerts. These activities are also related to the risk management associated with the blocking/failure/hacking attack on a given cryptocurrency exchange.

Step 4 – Automatic arbitrage system

The CryptonAR system will be expanded with the function of automatic purchase/sale of cryptocurrencies. As a security measure, manual confirmation will be required to finalize the action.

Step 5 – Trading system

At this stage, the CryptonAR system will be expanded with an automatic trading mechanism that tracks trends in the cryptocurrency market and uses traders' opportunities. Example: an automatic mechanism will buy a given cryptocurrency under the given condition "X" and sell it under the given condition "Y". The use of trades will provide additional profit and increase the profitability of the whole CryptonAR system. According to traders from the Forex market, the cryptocurrency market undergoes the same situation as Forex markets 20 years ago. A large part of cryptocurrency market participants are inexperienced, therefore, on the cryptocurrency market, you can successfully take advantage of opportunities that have ceased to exist many years ago in the mature stock market and Forex.

Step 6 – Supplementing the system with cryptocurrency exchanges with no API

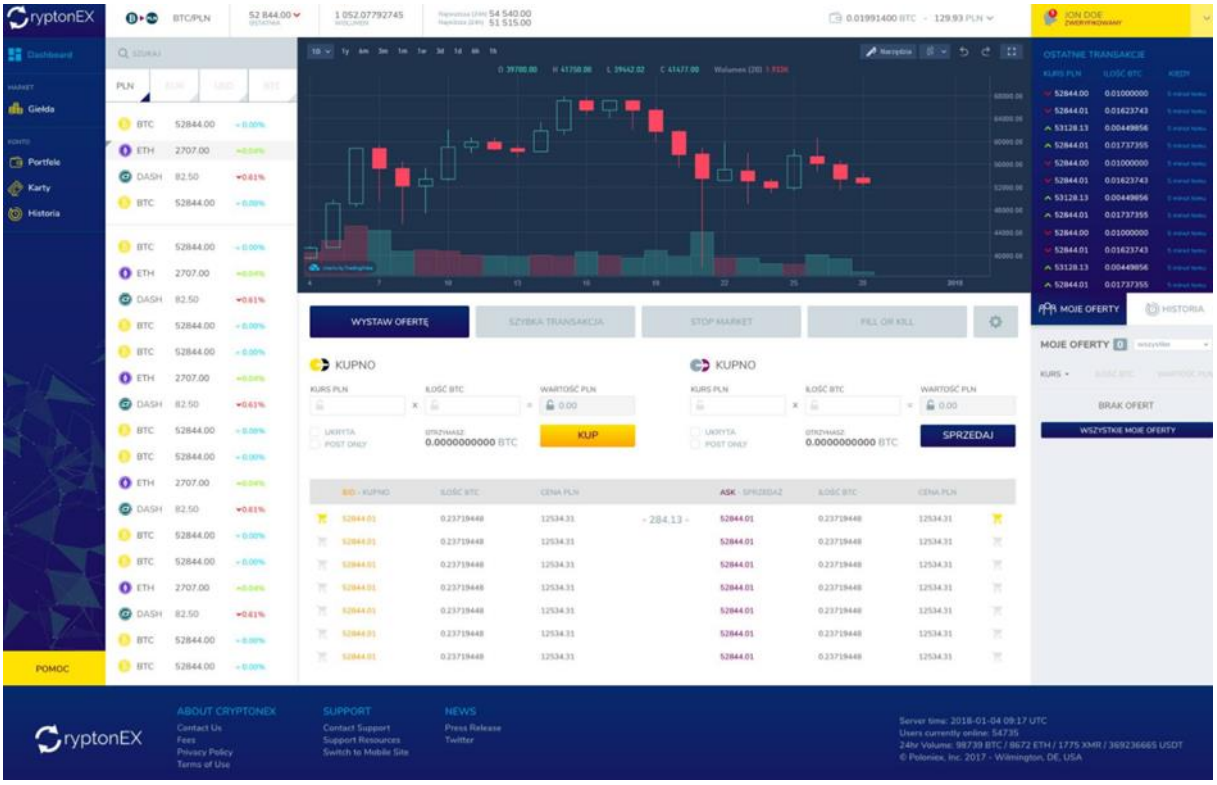
The solution will be implemented based on our system, which was previously created for the needs of the Forex market. The mechanism will simulate human activity and perform appropriate actions that will allow you to work on cryptocurrency exchanges that do not have APIs. Adding such markets to the CryptonAR project will increase the profitability of the system, as it will allow arbitrage on cryptocurrency market exchanges with less competition.

CryptonEX – cryptocurrency exchange

The professional cryptocurrency exchange with 0% commission for Crypton token holders. Compliant with the PCI DSS security standard. CryptonEX is created in partnership with uPaid company (biznes.upaid.pl/en) that implements payment systems for Mastercard and UBS, among others.

uPaid manages over 90 experts specialized in payment systems. It has a financial data security certificate PCI DSS (Payment Card Industry Data Security Standard) and the status of a Settlement Agent (license granted by the Polish Financial Supervision Authority, which authorizes the acceptance and settlement of funds on the principles of banking institutions. The president of the uPaid company is Krzysztof Drzyzga, who for over 5 years held the position of Head of Innovative Product Development for the CEE region in the MasterCard company.

We are also negotiating with the largest cryptocurrency exchange in Europe: BitBay about the possibility of establishing cooperation, creating a complementary stock exchange of cryptocurrencies and issuing the Crypton token on the BitBay exchange.



Market start: Q3 – Q4 2018

Assumed profitability: 50 - 100% per year

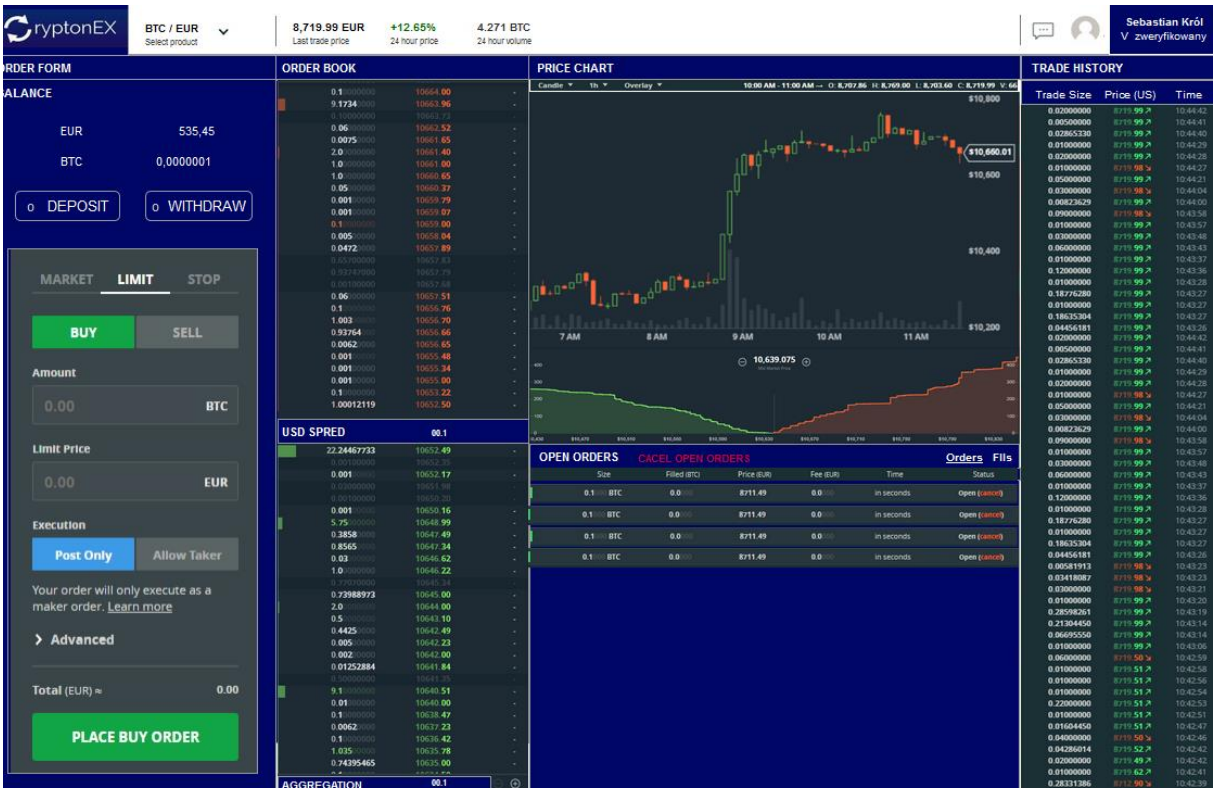
Investment status: The project is being implemented (PoC / MVP phase)

Seed round: Investment at level of $150 000

Required investment: $1 000 000

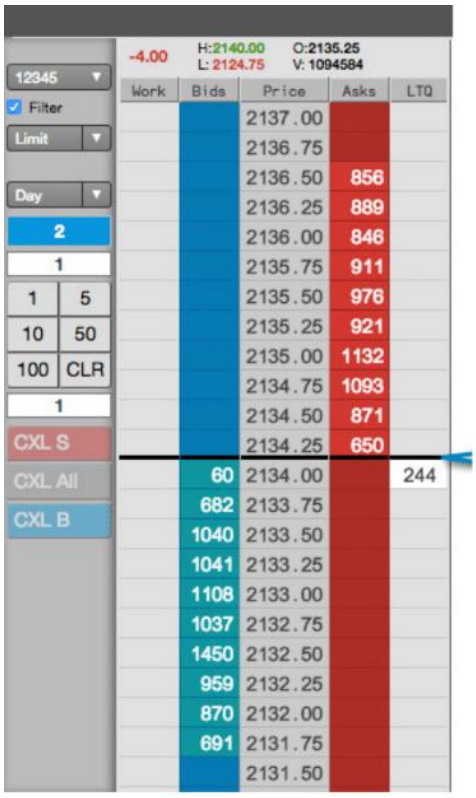
- 0% commission for Crypton token holders.
- An automated arbitrage mechanisms.
- Sale / purchase of Crypton tokens and many more.
- Many payment methods: FIAT/ cryptocurrency.
- An automated system ensuring high liquidity of transactions on the exchange.
- High level of security - compliant with the PCI DSS certification.
- Credibility and security guaranteed by prestigious financial institutions.
- Compliance with the clearance agent certification granted by the Polish Financial Supervision Authority, which authorizes the acceptance / settlement of funds on a banking basis.
- Simple and clear interface, easy & professional version.

The CryptonEX exchange panel will be adapted to various levels of user experience. In the "easy" version, simple and transparent mechanisms will be made available providing efficient and fast trading of cryptocurrencies.



For advanced traders, the dedicated "professional" version will be available with a range of supporting mechanisms such as: arbitrage, transaction mechanisms, a cryptocurrency price comparison platform with the possibility of buying them. This solution will allow you to buy the given cryptocurrency at the lowest price on the market from the level of one stock exchange - CryptonEX.

The exchange panel of CryptonEX in the professional version will also include price ladder / depth of market mechanisms that will enable mass trading of cryptocurrencies and are widely used in advanced trader systems for traditional markets (currently they are very rarely implemented for cryptocurrencies).



In the advanced version, the CryptonEX exchange will also be equipped with previous data on currency exchange rates with the possibility of checking strategies / algorithms and mechanisms with the ability to write own scripts, as it is done in **MetaTrader**.

The CryptonEX exchange will also have a very broad support for ICO, including a ready administration / token management panel for ICOs, which will let ICOs use it, without having to write one of their own.

The CryptonEX exchange will enable the easy purchase of ICO tokens, from one place you will be able to purchase multiple tokens at the same time.

IQ Invest

The investment platform for cryptocurrencies using AI (artificial intelligence) to analyze Big Data about opinions, moods regarding cryptocurrencies and the dynamics of their changes in order to issue investment recommendations.

The IQ Invest system will regularly analyze the latest information, opinions and comments available on the Internet regarding individual cryptocurrency projects, as well as the dynamics with which this information appears. On this basis the system will create recommendations for buying / selling cryptocurrencies.

The scope of cryptocurrencies data collection will include:

- strictly business information
- acquiring valuable clients / partners / ....
- significant losses / lost contracts / ....
- published reports
- tracking dynamic changes of the exchange rate in correlation to published information
- analysis of opinions and moods regarding a given cryptocurrency and dynamics of the increase in their intensity - this will allow to obtain practically instantaneous information on media storms focused upon a given cryptocurrency.

The aforementioned data will be collected, among others, from: social media websites (Facebook, LinkedIn), specialized forums (industry and investment), business portals publishing statistical data and many other sources.

Such predictions based on big data analysis and social media channels cannot be provided by even the best of fundamental or technical analyses, furthermore we cannot obtain such predictions on the basis of cryptocurrency information available on the Internet, only combining this data with information about the public mood resulting from receiving the data gives the ability to predict further changes in exchange rates.

In the event of positive or negative information about the cryptocurrency, which may have a potentially significant impact on the exchange rate, the professional fund service, after analyzing the received indicators, will make final decisions regarding the purchase / sale of the given cryptocurrency.

The implementation of the IQ Invest project requires carrying out R&D work.

The initial planned R&D works include:

- development of artificial intelligence algorithms for quick assessment of the significance of a given type of information and data for the future value of cryptocurrency assets;
- development of predictive algorithms in order to obtain a high level of accuracy of the buy / sell recommendation;
- development of artificial intelligence algorithms designed to quickly develop buy / sell recommendations;

- developing machine learning algorithms in order to recognize new data sources and information relevant to the investment system and "learning" the way of obtaining information from them;
- designing artificial intelligence algorithms for assessing the effectiveness of particular types of investment system behaviors in order to quickly introduce adjustments to its operation to increase its effectiveness.

The IQ Invest project will provide user-friendly tools for cryptocurrency traders that will allow them to optimize their profits by creating customizable robotic traders, even without advanced technological knowledge.

CryptoTrader

The automatic trading system dedicated to the cryptocurrency market, for which it is possible to set specific operating principles. These guidelines establish when the system purchases/sells cryptocurrencies in a fully automated way.

The system will allow you to set the conditions under which an automatic trader will buy / sell cryptocurrencies, e.g. buy when the rate increases and sell when the rate drops by X% from the highest achieved level.

The system will contain a whole range of trader strategies specially adapted to the cryptocurrency market. They operate completely differently than on the Forex market, because in this case the cryptocurrency market exchange rates fluctuations are very large which also creates much larger trader opportunities than on the traditional forex market, where currency fluctuations rarely exceed 1% per day.

The system will be based on many years of forex and cryptocurrency markets experience of partners involved in the project. Some of them have extensive **Wall Street** experience.

CryptonIndex

This system enables imitating mechanisms from mature stock markets and the Forex market in the cryptocurrency world by creating dedicated indexes and derivatives for the cryptocurrency market.

Mature stock exchanges have long had well-developed platforms for indexes, options and derivatives. CryptonIndex will allow you to map these mechanisms to the cryptocurrency market by creating a dedicated platform and providing such a service for cryptocurrencies.

OneClickPay

The online payment system which requires just one click to complete the payment via the internet, using blockchain technology to ensure transaction security.

Thanks to the OneClickPay system, the payment will be made just by "one click" on the website of a given product / service.

The implementation of the OneClickPay payment system will help streamline transaction mechanisms dedicated to online payments.

The payment will be made via a purchase button, which will be displayed directly on the website of a given product / service via iFrame technology as part of the OneClickPay system.

This solution will allow you to make a payment without having to log in to the OneClickPay system each time or be redirected to another website.

Additionally, the OneClickPay system will have such functionalities as: the ability to confirm transactions via a code sent by a text or a scoring system.

The accepted business model will be commission settlements from completed transactions.

The advantages of the OneClickPay micropayment system for users:

- Immediate payment completion with one click;
- Immediate payment confirmation enabling immediate shipment of goods / receiving the ordered goods;
- The possibility of making payments for small amounts while maintaining a low commission;
- No need to log in to your bank account or bother with new user registration;
- The use of Blockchain mechanisms to ensure transaction security.

Benefits of the OneClickPay micropayment system for Publishers:

- Immediate payment reception enabling immediate shipment of goods / sending the ordered goods;
- Significant reduction in the coefficient of abandoned shopping baskets, thanks to the immediate payment with a single click;
- The buyer will not be forced to leave the website, which will make purchases made in this way more impulsive, thanks to which the average value of the order may increase.
- As part of the project, R&D works will be carried out, allowing to develop a prototype of the OneClickPay payment system based on the mechanisms of decentralized block chains.

The initial scope of R&D works is:

- Research on a one-click payment prototype using blockchain technology;
- Research on developing a prototype of blockchain mechanisms for transferring funds through a one-click payment model;
- Research on the stability of blockchain mechanisms to transfer funds in the one-click payment model;
- Research on a prototype of smart contract algorithms for transferring funds in the one-click payment model

- Research on the stability of propagating information to network nodes for blockchain mechanisms to transfer funds in the one-click payment model
- Research on algorithms for anomaly detection for blockchain operation mechanisms for transferring funds in the one-click payment model;
- Research on the optimization of data transfer for blockchains for the transfer of funds in the one-click payment model;
- Research on effective verification, archiving and storage of data using blockchain for funds transfer in the one-click payment model
- Research on the prototype performance;
- Prototype safety testing;
- Data transmission rate tests depending on the transmission nodes used

Fiat-Crypto PSD2 Exchanger

A payment system that automatically integrates the fiat currency market with cryptocurrencies thanks to the **PSD2 directive** (Payment Services Directive 2).

Thanks to the PSD2 directive, one can commission payments from banks directly from the world of cryptocurrencies without having to log into the traditional banks' systems, as well as access an automatic process for the exchange of cryptocurrencies to fiat currencies and vice versa.

The entirety of the mechanisms is possible thanks to the PSD2 directive:

https://en.wikipedia.org/wiki/Payment_Services_Directive#Revised_Directive_on_Payment_Services_(PSD2)

The Payment Services Directive (PSD, Directive 2007/64/EC, replaced by PSD 2, Directive (EU) 2015/2366) is an EU Directive, administered by the European Commission (Directorate General Internal Market) to regulate payment services and payment service providers throughout the European Union (EU) and European Economic Area (EEA).

The Directive's purpose was to increase pan-European competition and participation in the payments industry also **from non-banks**, and to provide for a level playing field by harmonizing consumer protection and the rights and **obligations for payment providers and users**.

Crypton Bank

Most users of the traditional financial world are accustomed to the mechanisms of traditional banking, such as possibility:

- Call on the call center
- Contact with a physical person
- Reminding the password
- Debit and credit cards, etc.
- Online banking system showing transaction history, etc.
- Confirming transactions via SMS
- Mobile banking system

...

We want to make these advantages of traditional banking systems available for the world of cryptocurrencies.

Due to the fact that we create the entire financial ecosystem for the world of cryptocurrencies, the bank should not be missing in it, although in some way it contradicts the idea of decentralization achieved thanks to blockchain; however, it will provide mechanisms to those users, who are accustomed to traditional financial systems, giving them the chance to gradually implement themselves to the world of cryptocurrencies.

For users well-versed with the cryptocurrency world, it will give advantages such as a transparent online system similar to banking systems, a system available on mobile, debit and credit cards, etc.

FinScore

The system based on the financial scoring allowing postponing payments for goods purchased via the internet based on the value of cryptocurrencies owned. FinScore **will enable buying goods online with the option to pay after 2 weeks.**

Market statistics of the reasons for the abandonment of shopping carts

Ve Interactive statistics, based on the monitoring of over 20% of the global e-commerce market, indicate that the average online store loses an average of 40% of customers already in the first few seconds of their visit.

The reasons for the high bounce rate may be internal - low quality of website design and usability, poor quality of content on the website or technical problems; marketing - incorrect selection of keywords in positioning, misleading content or creation of the advertisement, misleading title or description of the page; and external - faulty links, mismatches to users' preferences, distracting factors or sporadic errors in the search engine.

Of those, who remained on the store's website, an average of 50% goes away even without adding products to the shopping cart. The reasons for low involvement may be internal - unfriendly navigation on the website, problems with the availability of the offer, insufficient quality of content and information, poor service quality, technical problems on the website, lack of a website version adapted to mobile devices; or external - other user preferences, price and competition comparison shopping engine activity, distractions, technical problems.

75% of customers, who were close to placing an order, do not do it, abandoning the shopping carts and with them the chances of the seller's profit, by the reasons, that may be internal - insufficient usefulness and navigation on the website, complicated order process, technical problems, limited choice of payment methods, high costs and long delivery times, no mobile website version; and external - the wealth of the would-be customer's wallet, haste and distractions, lack of trust, technical problems on the customer side.

Attracting the client to the website, in most cases, involves a real cost, which should be borne in advance. Why so few sellers think about protecting this investment, accepting that even 90% of potential customers leave without conversion. Analyzing this problem, the majority of the analysis of

the e-commerce market shows that the decisive reason for rejecting the shopping cart is the product price and insufficient payment methods.

A solution that significantly improves the value of shopping carts

After the market analyzes, it was diagnosed that a significant percentage of shopping carts can be recovered by introducing a deferred payment method - the customer could order the goods but pay for them within 7 or 14 days.

Such a solution would allow the user to make purchases without having to pay for them immediately and with a 14-day payment date, the user could order the goods, and after receiving and checking them - in the case of dissatisfaction, return without involving funds.

The outline of the FinScore system operation

The FinScore system allows you to deposit a certain amount of cryptocurrency through a smart contract.

Thanks to this, the recipient of the payment has the guarantee that he will receive the payment for the ordered goods, and the buyer can place an order with a deferred payment date up to 2 weeks.

The possibility of placing an order with a deferred payment date will be possible after the scoring verification by the system - based on available data about the user - e.g. market value of phone/computer held, historical data from past transactions, list of debtors, big data available via the Internet (e.g. Social Media).

Statistics on sharing your data in the network

According to Kaspersky Lab research, the overwhelming majority of people, as much as 93%, share their data in the network. Over 70% of surveyed users post pictures and videos of their children, while 40% of them provide private and confidential videos and photos of other people.

Posting information, photos and other content on social networks like Facebook, Twitter or Instagram is a daily routine for many people. At the same time, there are many economic databases on the market based on which it is possible to reference people's creditworthiness.

Description of R&D research for the FinScore system

As part of the R&D research work, it is planned to develop a behavioral assessment model, assessing people based on data made available on the Internet, in order to market deferred payment services in online stores.

The assessment will be based on the profiling of individuals that enables the study of personality or individual behavior, interests and habits that can be analyzed and predicted. Profiling has already found its source in many areas of life in the form of consumer profiles, traffic profiles, user profiles or social profiles. Profiling is not always visible and can be done without the knowledge of a given subject.

The types of data used to create a person's profile include, among others:

- Internet resources and browsing history;
- Education and professional data;
- Data from existing customer relationships;
- Data collected to assess creditworthiness;
- Financial and payment data;
- Consumer complaints or inquiries;
- Travel and location data;
- Data on property ownership;
- Information from store cards and credit cards;
- Buying habits of consumers;

- Data from applications and mobile devices, e.g. Trackers;
- Lifestyle and behavior data, collected from mobile phones;
- Social Media information;
- Video surveillance systems;
- Biometric systems;
- IoT - Internet of Things.

Market and other systems

There are similar solutions on the market (Klarna, Synerise, Twisto.cz, Friendlyscore.com), which have had enormous market success, but have not been improved by the advantages of Blockchain technology. The most-known Klarna project is currently priced at over $ 2,000,000,000.

Genesis and solution

Currently, a large % of shopping carts in online stores are abandoned due to the long payment process or the inability to pay immediately in a convenient way - e.g. the lack of a payment card at hand, an uncomfortable payment system in the mobile version. Thanks to the FinScore platform, after successful verification, you will be able to order the goods, test it and only pay for it or send it back if it does not meet our expectations within 14 days.

Relative amount can be automatically charged from the deposit, so we will not have to make the payment manually, when we do not have the opportunity actually. For the scoring verification process, the FinScore system will also use the data on billing and the number of transactions from other online stores that will work with the system. For FinScore project, the pre-planned R&D works are:

- Research works concentrated at developing algorithms based on artificial neural networks - artificial intelligence useful for multi-criteria search of relevant information from dispersed Big Data sources;
- Research works aiming at the development of scoring algorithms based on artificial neural networks for multi-criteria data analysis, setting data scoring and priority of importance;
- Research work on mechanisms and data structures providing optimal storage of collected Big Data content and processing it;
- Evolvement of machine learning algorithms for "learning" by the system of patterns in customers behavior to develop "intelligent" and predictive models that can increase the accuracy of customer solvency assessments.

Basic scientific assumptions of the project

The goal of the project is, inter alia, the use of social network methods, that make it possible to analyze data concerning the relationships between people.

Social network analysis (SNA) is a method of studying social structure and patterns of relationships between people and groups. It also enables the study of social consequences of these structures (e.g.: allocation of resources, information flows, changing points of view etc.). The specificity of SNA first of all relies on a different research perspective, according to which, the explanatory power lies not in the attributes of the studied subjects (i.e. their features, attitudes or descriptions of their behavior), but above all else in the relations occurring between them.

That's because, in this case, the subject of research are the networks of relations connecting various types of elements (so-called nodes). The role of network nodes can be played by different business entities or natural persons. The structure of the network will be created with wide range of relationships starting from simple interpersonal relationships (e.g. friendship, family connections, cooperation, e.g. LinkedIn, Facebook) through economic relations (e.g. capital links, cooperation within strategic alliances, participation in companies, or management boards). In addition, the analyzed relationships may have a symmetrical character (reciprocal) or unidirectional, binary (i.e. monovalent) or valued. Ipso facto, we can conclude, that the analysis of social networks is a universal research tool that is suitable

wherever any types of relationships are analyzed. Nowadays, SNA as a scientific tool is commonly used in social sciences, management, Internet research or market research. Due to the fact, that the relations are the focus of this research method, the collected data has relational character, i.e. it belongs to network elements connected with the exact relation. That's why the specific SNA process of presenting and analyzing data differs significantly. There are two basic ways to display data: using a matrix array or by using a diagram generated by a visualization program.

SNA makes it possible to analyze the network on three basic levels:

- At the level of the entire network (e.g. by showing the number of relations, so-called network density, distance between network elements, core extraction and network peripheries etc.);
- At the level of individual parts of the network (e.g. by defining the relations between different groups, indicating the central and isolated groups of the network, focusing on bottlenecks between groups, etc.);
- At the level of individual network nodes (e.g. indication of elements that are network integrators, concentrating on major intermediaries, indication of peripheral entities, etc.)

The results of the social networks analysis, thanks to the appropriate software can also be provided with visualizations that significantly facilitate further interpretation and ratiocination. Analysis of social networks is rather new and still dynamically developing research tool that can perfectly use in our project.

The increasing popularity of SNA is related to mentioned before development of analytical software and increased interest from business, as well as the activities of many institutes and organizations that are working to develop this tool, including: International Network for Social Network Analysis, Network Roundtable, or Institute for Social Network Analysis of the Economy.

ICOExchanger

The system of mutual exchange of tokens between projects in the ICO phase, allowing for the diversification of risk during emissions of its own cryptocurrency and effective cooperation between partner ICOs.

An exclusive solution on the market that allows exchanging tokens between ICOs (and ICO token holders) that want to support each other. Holders of tokens from one ICO will be able to exchange them for tokens of another ICO.

A similar solution is offered by ICOBOX - Interproject Token Swap, but there the only possibility is to exchange ICOS token for ICO tokens implemented internally on the platform.

ICOStarter

ICOStarter is an acceleration program for ICO projects providing full support: technological, business, marketing and legal for companies interested in launching their own ICO.

Solution dedicated to comprehensive ICO launch for companies that want to emit their token **and for listed companies that want to tokenize their shares.**

ICOStarter support packages will include, among others: a complex technological solution, full legal and business consulting, a project website, creation of WhitePaper and full support in marketing and PR. All services will be provided by experts from the Fintech / Blockchain industry.

HFTProt

HFTProt is a dedicated communication protocol and devices for very fast data transmission required in HFT – High Frequency Trading, intended for trading on the cryptocurrency market.

Project of own dedicated communication protocol and network infrastructure - communication devices using this protocol (modems, routers, ...) for very fast data transmission for use applications of HFT - High Frequency Trading.

Dedicated data transmission protocol created for the purpose of ultrafast data transmission and devices supporting it will give a chance to become one of the world's leaders in this market.

Today, it is hard to believe for anyone from outside the market, but over 50% of transactions on the global Forex (currency) market are made by automaton operating by using the mechanisms of High Frequency Trading. Every large investment bank has such a system.

The aim of this project is to create an HFT system dedicated to the cryptocurrency market, taking into account its specification and mechanisms.

HFT (High Frequency Trading) is a technique of investing consisting in concluding many exchange transactions in the shortest possible time, using specially programmed computers, which automatically make transactions on the basis of decision-making algorithms. For investors using HFT, every millisecond may be significant (a delay in response may mean that someone else will carry out the transaction). In high frequency trading, the profit from one transaction may not exceed a fraction of

the dollar (or one pip in the case of Forex trading). A characteristic feature of HFT is the very short time between buying and selling a given instrument (time counted in milliseconds).

High Frequency Trading are systems that allow traders to make very quick transactions. They allow you to overtake sales or buy orders of investors, who do not use quick transactions. Currently, they are available mainly on large western exchanges, but their popularity is growing (on the largest HFT exchanges it already generates the majority of turnover).

The general idea: automated trading based on very small changes in rates, but frequent transactions. The basic base for HFT algorithms are not macroeconomic data or business cycles in the economy, but the behavior of prices of individual financial instruments (even if these prices are strongly unconnected from the real economic value of rights to a particular type of property).

At HFT, the most important thing is to use short-term trends in the prevalence of supply or demand and to anticipate the competition. The fight takes place in thousandth or even one millionths of a second. Large funds are invested in the development of increasingly faster fiber optic models. The key seems to be the perfection in the transaction itself (in terms of reaction speed) than the appropriate selection of financial instruments due to the actual value of the rights they provide to their holder.

Why we want to create our own HFT protocol and network devices?

Lossless transmission - currently used on the Internet

Today all communication on the Internet is based on lossless transmission - it means that it is not acceptable losing even one bit of information at the end of sending data from one computer to another.

In most file types, if we cut even 1 bit, it will stop working and it will be unusable. Such reliability of sending the entire data takes a lot of time during transmission and requires a lot of time expenditure to meet these requirements.

Lossy transmission - better for HFT transactions

Transmission assumed in this project is a lossy transmission, in which up to 90% of data may get lost on the way. For the transmission of data needed for HFT, it is not important that all of the data reach the target, only that it happens as quickly as possible, faster than when transmitting through other transmission channels.

Normal 7 layered network communication based on the OSI model assumes lossless, here it is unnecessary and the approach to the issue of the method enabling the loss will greatly speed up the data transfer.

Even if only a few percent of the data are effectively transmitted using lossy communication, as fast as normal protocols used for Internet communication, it will be enough to win on the HFT market.

To transfer data in such a way using the existing network infrastructure, it is required to create your own communication protocol and your own network devices that can use these protocols. It is needed at the input of the signal and at its output, transmission via the network can take place using the currently existing network infrastructure.

The following R&D works are initially assumed in the HFT Prot project:

- Research on the creation of a communication protocol dedicated to HFT transactions - High Frequency Trading;
- Research on adjusting the compliance of data transmission using the HFT Prot communication protocol in the conditions of application of the seven-layer structure of the OSI RM network;
- Research on the possibility of using the HFT Prot communication protocol in a multi-layer ISO OSI RM network structure (ISO Open Systems Interconnection Reference Model);
- Research on the development of a prototype router communication device using the HFT Prot communication protocol;

- Research on the development of a prototype modem communication device using the HFT Prot communication protocol;
- Research on optimization algorithms of data transfer speed with the HFT Prot protocol;
- Research on the efficiency of data transmission tunneling;
- Research on the security of data transmission;
- Research on the data transmission rate depending on the transmission nodes used;
- Conducting research on the analysis of TCP/IP stack protocol using the HFT Prot communication protocol

CryptonBenefit

A motivating system for companies based on blockchain technology, with the option of payment for specific tasks immediately, omitting some complicated accounting procedures which extend this process to several weeks.

A project for companies that want to change their motivational systems, so that they can reward their employees as soon as they do their jobs, but not for example a few weeks later after undergoing a complicated accounting procedure. System will be implemented in a way that it will be easy to use with no need for Smart Contract software.

The project will use Blockchain assets - speed, security, guaranteed payment order based on principles of Smart Contract.

Crypton ICO Rating

Creating a credible ICO rating, in which projects will be evaluated by experts from the Fintech / Blockchain market with huge business and investment experience derived from traditional FinTech markets.

Nowadays, some of the ratings are created by very young people without much experience in the investment market. These people have quickly adapted to the world of cryptocurrencies and used this niche very well - for which we appreciate them very much.

In our opinion, a useful tool will be also a cryptocurrency rating based on traditional investments criteria used in the traditional world of venture capital / private equity investments connected with specific criteria required for the analysis of cryptocurrency / ICO projects.

This rating will be organized especially for the Crypton fund's specific needs, in order to evaluate the ICO investment projects in which the Crypton fund will be invested.

Evaluation results will be provided in the form of assessment and justification on the Crypton platform and we will also give access to it to all other interested parties, and then distribute them widely on the Internet.

We will ourselves invest in ICO / cryptocurrencies based on this rating, so we will avoid these situations where someone pays and gets high ratings.

Crypton ICO Creator

Creating the SaaS-type service for safe ICO implementation along with the entire solution package, e.g.:

- Established payment system in cryptocurrencies and fiat
- Tokens buying panel
- Prepared administrative panel to manage the distribution of tokens
- An administrative panel for user management
- Compatibility with prevention money laundering requirements KYC (Know your customer)
- Compatibility with AML requirements (Anti-Money Laundering)
- SAFT compliance (Simple Agreement for Future Tokens)
- Smart Contract generator
- Reference program
- Configuration of token sales
- Support in tokens emitting on stock exchanges
- Support in mass marketing mechanisms
- Support in selecting the legal jurisdictions...
- Handling the international servers
- Support in compliance with PCI DSS
- Protection against DDoS attacks

Providing such services will allow you to quickly start emitting ICO and receiving funds. It will save you a lot of time and money, that you would have to be spent on IT works and many other activities, that in this case could be used better: e.g. to polish up the ICO's merits, ICO promotion and development.

About KYC:

https://en.wikipedia.org/wiki/Know_your_customer

Crypton Certificate BI DSS

BI DSS Certification (Blockchain Industry Data Security Standard) will confirm the correct level of security for cryptocurrency exchanges. It will be the equivalent of certification for payment card systems – PCI DSS (Payment Card Industry Data Security Standard) https://pl.wikipedia.org/wiki/Payment_Card_Industry_Data_Security_Standard

Many times, in the world of cryptocurrencies, especially concerning its earlier years, there have been cases of hacking the cryptocurrency exchanged and stealing the resources. That can be significantly limited through proper rules and safety. We want to help with that through creating and distributing safety certificates for cryptocurrency exchanges.

Every cryptocurrency exchange will be able to ask us for a BI DSS certification. We will perform a thorough security audit and will relay the notes concerning things needing fixing for the exchange to meet the requirements necessary for receiving a BI DSS certificate. After those are met, we will grant them a BI DSS certificate, which will need an annual audit aimed at checking whether the security norms are still on the appropriate letter.

ROADMAP

Q3 2017

- Completing the executive team
- Assigning roles and responsibilities between team members
- Analysis and selection of the proposals to the project investment portfolio

Q4 2017

- Collecting initial $1M for the fund
- First pool of investments: CryptonAR and CryptonEx
- First fund investments in external ICOs / cryptocurrencies

Q1 2018

- Preparation for Crypton ICO
- Crypton cryptocurrency development
- Global marketing and PR strategy development
- Business strategy development
- IT strategy development

Q2 2018

- Establishing a dedicated company for the Crypton Venture Capital fund
- Completing the fund's team members
- ICO start

- Crypton.vc platform development

Q3 2018

- Deep analysis of investment projects portfolio
- Voting for the first Crypton investments proposals
- Investing in the first pool of projects

Q4 2018

- Market launch for the first Crypton investments: CryptonAR and CryptonEx
- Voting for the next Crypton investments proposals
- Payment of the first dividend for Crypton token holders

CRYPTON VC - REVIEWS

In my career, I have worked as Director of Innovation at MasterCard for 5 years. It taught me to be open to new technologies and concepts, but also to calmly assess the situation and present a professional, business approach.

Crypton VC has a team that knows how to create a trustworthy Venture Capital fund. They have good intuition and are fully competent to effectively analyze new business ideas or start-ups in which Crypton will invest.

Additionally, they have documented experience in investing a total sum of over 150 million dollars between them. I think that they dreamed of creating a common venture capital fund for years. ICO was a big chance for solid, trustworthy people such as the Crypton VC team.

I think that what makes Crypton trustworthy is the team and the people creating it. I have known most of them personally for many years and I feel that they are able to implement an interesting and profitable project that will turn into a successful venture capital fund.

The average investment period in venture capital projects is 5-7 years. We, as Crypton, will be investing in project as early as possible, when they show maximum increases.

In recent years, the cryptocurrency and ICO market is in a very dynamic developmental trend. If we connect that to the fact that people creating the Crypton fund know what they're doing and know how to avoid failure – the answer appears by itself.

Most of ICO projects does not carry out what they promised because the teams of most ICO projects are set on acquirement of resources only from the start, failing to account in their plans for implementing the project after the end of the ICO.

I appreciate it very much that in case of the Crypton fund, the fund functioning model and the proposed investment portfolio are known before the start of the ICO.

What makes the ICO of the Crypton fund even more trustworthy is the fact, that two projects from the proposed fund portfolio have already been implemented and work on the MVP – Minimal Valuable Product level, with one of them – CryptonAR, an arbitrage system for the cryptocurrency market, is already an earning project with a very high return rate. The project is implemented jointly with a large hedge fund which owns assets for over $10M, and has been investing for many years on the Forex market, and on the cryptocurrency market for some time, having millions of dollars tied into it. The manager of the hedge fund has many years of investing experience, including experience as a broker on Wall Street.

In my opinion it guarantees that the Crypton team wants to actually implement the propositions and to professionally lead the Venture Capital fund, which is also guaranteed by the huge experience of the team, confirmed by an effective implementation of over 50 investments venture capital and private equity between them.

Currently, as the president of the uPaid company, I am responsible for modern payment technologies for banks and companies, including the e-commerce sector. I will try my best to help the Crypton VC team with all my experience with payment security, so that their vision might be 100% implemented.

Krzysztof Drzyzga

As the Head of Product Management at Visa or the chairman of SkyCash and mPay online payment companies, I have dealt with numerous projects in the Fintech industry. Based on that experience, I can conclusively declare that the portfolio of the Crypton fund's projects contains attractive and very promising projects that I will be delighted to support with my whole 15 plus years of experience in the Fintech industry.

The first cryptocurrency I got involved with was the AtenCoin cryptocurrency, which had already been introduced on the market back in 2013. I had been invited plenty of times into groups of investors and advisors at ICO projects, but I would always decline. Mostly because it is very important for me to get involved in things that I believe in. I need to believe in the team, believe in the idea, but the most important thing is, I have to believe in the end result being worth getting involved in. Crypton VC complies with all those requirements in my eyes.

In my career, I have built companies and I have collected funds from investors. I would always say the same thing: "Please, don't invest in something that you don't believe in, or that you're not able to believe in. And if you do believe, be prepared for a long journey, as building anything new is hard work".

My experience shows that most of ICO projects are created by very young people with next to zero business and investment experience. It makes it impossible to conduct important, competent business analyses of the enterprise that they collect funds for under the ICO.

On top of that, the token purchasers at most ICOs have no idea how the collected funds are used, and no transparency means no trust.

When it comes to the Crypton fund, it looks completely different, the Crypton team has many years of vast experience both in carrying out very advanced IT systems as well as in the investment area, international trade or global-scale marketing. It is confirmed, among other things, by numerous awards at investment project competitions. The Crypton team can boast such accomplishments as: winning the Polish edition of Dragon's Den, winning the best startup competition hosted by TMT Venture on the Warsaw Stock Exchange or being nominated to SeedCamp Barcelona in the best e-business category.

When we speak of Crypton V, we mean a whole new dimension in the world of investment. It is my firm belief that Crypton Venture Capital will succeed, and the value of its tokens will be growing very rapidly. However, success mostly is made of the team's hard work and the capital investment it is required to bear. What we're doing is providing Crypton VC with financing so that they can fulfill their vision and change the world of FinTech investments that we know.

Piotr Warsicki

Currently there's plenty of ICO projects being launched. When looking at them, it is very important to notice the difference between a reliable team with years of experience in carrying out IT and Fintech projects as well as a very good and well-thought-out idea of an ICO project, and a team that has nothing but the idea, and plenty of times it is one based on unrealistic assumptions, too.

When following the ICO market, I see plenty of projects that, while being based on the Ethereum blockchain, promise things that are impossible to be carried out by the Ethereum blockchain and consequently - these projects are impossible to carry out.

The Crypton fund has a reliable team with years of experience in carrying out IT and Fintech projects. They have two big companies behind them, among others: uPaid – a company that is an official partner of MasterCard and ITligent Group – an IT company with years of experience in carrying out IT systems, including FinTech, hiring over 70 people, including several dozen programmers, their clients including such companies as PZU, Gorilla Group or RTB House. ITligent also runs investment activity, investing in project in the areas of: FinTech / Blockchain / MedTech or e-Marketing.

The Executive Director of Crypton Venture Capital, Jacek Nowak, has many years of experience as an investor, he has been a board member and a shareholder of many companies, mostly in the IT / Internet sector. In his career, he has worked as an Investment Development Director in the Arteria S.A. corporate group, which is listed on the Warsaw Stock Exchange. It has carried out two investments together with the Wirtualna Polska group – a company that owns two biggest web portals in Poland. The Wirtualna Polska group is listed on the Warsaw Stock Exchange, with capitalization of nearly half a billion dollars. Before that, Jacek Nowak had spent several years participating in building bank systems and many other corporate IT systems, working for companies such as Oracle or Accenture.

The CTO of Crypton Venture Capital, Marcin Grzebyk, is an IT Director with nearly 15 years of experience, also as an investor, which makes a unique combination of technical competences as well as business and investment approach. In his career, working at two Venture Capital funds among others, he has conducted investment processes for over 20 projects, for a total of over $5M.

I myself am closely related to new technologies and specialize in Internet projects, and because of that I perfectly remember the boom for Internet companies, or the so-called dotcoms. The current situation on the cryptocurrency and ICO market makes it possible to draw an analogy to those events, but just like it was with the Internet bubble – the strongest will survive and evolve into giants such as Google or Facebook. I believe that the experience of the Crypton fund team will result in creating a solid and modern venture fund and form the basis for building a world of investment we've never seen before – based on the revolutionary blockchain technology that will completely change the world of finances and the Internet.

One great advantage of the Crypton fund is enabling investors to co-decide through voting on the Crypton.vc platform about investments that will be carried out by the fund.

It gives an individual investor an opportunity to directly decide on choosing investment projects for the fund's portfolio.

It is something that, when it comes to classical venture capital funds, pretty much never happens and gives the Crypton fund a great advantage over classical venture capital or private equity type funds.

Each project will obviously be subject to multi-criteria analyses based on patterns already defined for that moment in the white paper.

The issue price of the Crypton tokens is a great investment opportunity relative to its potential value in the future. In other words, you buy the future, at the present price and even though investing in an

ICO entails a risk, I have decided to invest in Crypton and join them in changing the present into the future.

FAQ

What is Crypton VC?

Crypton is a tokenized VC fund investing in promising projects in the FinTech area, other cryptocurrencies and ICOs. For our portfolio projects with tokenization features, we will provide additional financial acceleration by launching separate ICOs. We help monetize interesting projects based on our investment and business experience. We want to provide full support for investors in the still uncertain and unregulated market of blockchain-based projects.

Do Crypton team have investment experience for a project of this scale?

We are highly experienced FinTech professionals and investors. In total, we have invested over $150M, including $2M in projects related to Blockchain and cryptocurrency projects. We are owners of more than 15 FinTech companies We have successfully completed over 50 investments. We have invested together with: Wirtualna Polska (Top 1 of the largest internet portals in Poland, with a revenue of $150M, listed on Warsaw Stock Exchange with $0.5B market capitalization); Arteria S.A. (the largest capital group in business process outsourcing area in Poland with a revenue of $45M) and many other companies. Our team have great experience gained in cooperation with: MasterCard, VISA, UBS, Oracle, Accenture.

What actual problem does Crypton solve?

The venture investments market, like crowdfunding and the crypto assets markets, is experiencing serious difficulties because many projects either fail or don't achieve the announced results after raising funds.

Crypton VC is designed to solve multiple problems and create a transparent venture fund aimed at maximizing the development potential and scaling up of FinTech / Blockchain projects. Additional advantages are: quick scaling of projects, transparency of investments and investment liquidity.

What is the difference between Crypton and others?

First of all, we have defined our own portfolio of FinTech projects, of which two projects already have a MVP. Secondly, we have a great team and advisers who have extensive experience in the investment market. We have already invested over $2M in Blockchain-based projects. Our knowledge and experience allow us to invest in projects with a high rate of return and conduct in-depth analysis of other ICOs so as to minimize the risk of losing funds, thanks to independent investments.

Why an ICO?

The aim of the Crypton ICO is to provide the capital that will enable Crypton, as a venture fund, to develop a fund to invest in prospective FinTech / Blockchain projects and to compete on equal terms with existing venture capital funds.

We believe that ICOs should serve as a long term-project, which would allow us to build the fundamentals for a solid fund and, at the same time, create a strong community with mutual interests.

What are the pre-ICO conditions?

During this period, you can receive a 30 percent bonus on the purchase of CRYPTON tokens. If you need an exclusive offer, please contact us: support@crypton.vc

How can I join to the Crypton VC ICO?

Supported payment methods are Bitcoin (BTC) and Ethereum (ETH). You need to register an account on our platform https://tokensale.crypton.vc, then:
1. Prepare a token-compatible wallet (you can join ICO only if you have a wallet with a private key), e.g. https://myetherwallet.com

2. Select the ETH or BTC amount that you want to transfer.

3. Send it to our address, provided after logging in to your account. You will also receive the address in an email just before the opening of the ICO.

4. After successfully transferring ETH or BTC to our smart contract, you will get the right number of Crypton tokens straight into your wallet.

5. We reserve the right to verify KYC. It is a quick and easy process that can be repeated if necessary.

What makes the Crypton token (CRN) unique?

The uniqueness of the CRN token is that once you have Crypton token, you can also get tokens from other ICOs from the Crypton Fund. One Crypton token is a chance for multiple investments opportunities.

What are Crypton token holder benefits?

Having Crypton tokens not only allows you to receive quarterly dividends, but also entitles you to vote on further investment proposals for the Crypton VC fund. Crypton token holders will also receive the appropriate number of tokens from running ICOs for fund portfolio projects and access to the exclusive pre-ICO.

Will Crypton tokens be ERC20 tokens?

Yes

Is there a minimum number of tokens to buy?

Minimum token purchase amount during the token sale is just 100 CRN tokens.

What will happen to CRYPTON tokens if they are not sold?

If we do not sell all **50,400,000** CRYPTON tokens in the ICO, the rest will be burned.

What exchanges will the Crypton token be placed on?

At this time, we are unable to disclose confidential information. Certainly, the CRYPON token will be available in the future on the CryptonEx stock market that we are creating.

Do you have a bounty campaign?

Yes, we have a bounty campaign! Click on https://crypton.vc/bounty to check all the details. We allocate three percent of tokens to the bonus campaign.

TERMS OF TOKENS SALE

The Purchaser understands that there are serious risks connected with buying crypto currency, such as heavy fluctuations of virtual or actual currency values, which in turn may lead to total loss of currency over short or long periods.

The Purchaser acknowledges and understands that the Tokens have no warranty whatsoever, expressed or implied, to the extent permitted by Applicable Law and accordingly that Tokens are purchased on an "as is" basis.

In order to reduce the possibility of fraud, phishing attempts and other schemes perpetrated by malicious third parties, the Holder agrees not to respond directly to any inquiry regarding its purchase of Tokens, including but not limited to email requests purportedly coming from Crypton. The Holder understands that Crypton may send the Holder emails from time-to-time, but these email notices will never ask for information or require a response from the Holder.

By purchasing the Crypton Tokens, the Purchaser confirms that he/she:

i) Is legally permitted to purchase Tokens;

ii) Is of a sufficient age to legally purchase Tokens or has received permission from a legal guardian who has reviewed and agreed to these Terms and the Sale Agreement;

Will take sole responsibility for any restrictions and risks associated with the purchase of Tokens as set in the Terms.

Agreement on participation in Crypton Tokens distribution event You enter into a binding agreement on participation in Crypton Tokens distribution event (i.e. the agreement purpose and aim of which is that you transfer ETH and receive Crypton Tokens), when you correctly and successfully go through a relevant procedure on crypton.vc , send your participation form (by giving all the required consents and accepting all the relevant terms) with all necessary data and transfer ETH (Ethers) to a relevant smart contract address (as described below), under the condition that prior to sending such participation form you have read, accepted and comply with these Terms and Conditions and gave all other required consents.

Each participant may use only one Ethereum wallet address to participate in Crypton Tokens distribution event (you cannot participate by using several ETH addresses).

Supply of Crypton Tokens - The total amount of: **72.000.000, 000** (seventy-two million) of Crypton Tokens may be generated (maximum).

The token distribution event Crypton Tokens will be executed in two stages: Pre-ICO and ICO (only in these time slots you can enter into an agreement on your participation in Crypton Tokens distribution event).

20% of all CRT's will be available during the Pre-ICO, while **70%** of all Crypton tokens will be available for receiving jointly during the Pre-ICO and ICO.

A maximum of **3%** of the total amount of Crypton Tokens may be used for distribution among participants of Bounty Campaign. A maximum of **10%** of the total supply of Crypton Tokens may be given to Founders and team.

A maximum of **5%** of the total supply of Crypton Tokens may be given to Crypton Advisors.

And maximum of **6%** of the total supply of Crypton Tokens may be used as a reserve.

Crypton Tokens distribution event timing and conditions

ICO specification:

Token: CRYPTON – CRN

Token Exchange Rate: 1 CRN = 1 USD

Technology CRN token is a cryptocurrency implemented through ERC-20 Token Standard technology of smart contract, based on Ethereum.

Total token supply: 72 000 000

Tokens for ICO: 50 400 000 (**tokens not sold will be burn**)

Pre-ICO bonus: 30%

Payment methods: BTC, ETH

Mining: No

Tokens lockups: **All the tokens of the fund founders and the team will be subject to a lockup for 2 years.**

The amount of transferred ETH determines the minimum amount of Crypton Tokens that can be received by you (based on the exchange rates determined above).

When your ETH is successfully transferred to Company's relevant smart contract address, the smart contract transfers immediately and automatically a relevant amount of Crypton Tokens to your wallet address.

Before selling Crypton Tokens we will immediately go through KYC / AML verification procedure.

Failure to go through the procedure immediately may stop rest of the selling procedure and payment process.

Please note that the Crypton will verify each ICO participant, according to criteria set forth by the Crypton itself, which also include KYC / AML-related procedures.

Cancellation & no refunds

As of the moment when you receive Crypton Tokens you cannot return them or demand any refund of whatever kind.

Simultaneously, we reserve our exclusive right to refuse or cancel your participation in Crypton Tokens distribution event at any time, if you do not go successfully through the KYC/AML verification - we will inform you about such situation before selling procedure and payment process (you will **not** lost funds if you do not go successfully through the KYC/AML verification – we just will not sell you tokens and you will not pay for them) .

Receiving Crypton Tokens from us is binding and final for you, which means that refunds or cancellations are not possible from your side (due to a nature of the smart contract).

It means that you lose your right of withdrawal, even if such withdrawal right is statutory (foreseen by binding provisions of law), to the furthest extent possible under such applicable provisions of law. Please make sure that you understand and agree for the consequences of such voluntary loss of statutory withdrawal period and request on immediate delivery of Crypton Tokens.

TERMS OF SERVICE

This document acts as an agreed upon Terms of Service ("Terms", "Terms of Service") between you ("Purchaser", "User", "you") and Crypton VC ("Crypton", "Company"). You accept these Terms when you purchase Crypton's CRN tokens ("Tokens") or use Crypton services or any other features, technologies or functionalities offered by Crypton on Crypton website at crypton.vc and tokensale.crypton.vc (collectively, "Site") or through any other means (collectively, "Services"). The terms "us", "we" or "our" refer to Crypton too.

Your access to and use of the Service is conditioned on your acceptance of and compliance with these Terms. These Terms apply to all visitors, users and others who access or use the Service. We will provide notice of any amendment to these Terms by posting any revised terms to the Site and updating the "Last updated" field above accordingly or by any other method we deem appropriate. We are not obligated to provide notice in any other method beyond these. Any change to these Terms will be effective immediately upon such notice and apply to any ongoing or subsequent use of the Site or Services. By accessing or using the Service you agree to be bound by these Terms. If you disagree with any part of the terms then you may not access the Service. This document stipulates general conditions for use of website crypton.vc. The conditions related with Tokens purchase are determined in Terms of Token Sale placed at tokensale.crypton.vc.

1. Qualifications of User in Order to Use the Site

The User represents and warrants that you are at least eighteen (18) years of age, are legally entitled to use the internet and services like those provided by Crypton VC (in any relevant jurisdiction in which you reside), and have not had your right to use our service previously suspended or revoked by us.

2. Illegal and Prohibited Use

You represent and warrant that you will not use the Site or Services for any criminal, illegal, or otherwise prohibited use, including (but not limited to) activities related to money-laundering, drug trafficking, human trafficking, weapon trafficking, terrorism, securities fraud, or tax evasion. You represent and warrant that you will not use our Site or Services to assist any other party in such illegal activity. You represent and warrant that you will not in any way use the Site or Services to: distribute spam, junk communications or chain letters; reverse engineer or otherwise improperly access any of the Site's or the Platforms underlying code or technical mechanisms; cause damage to the Site or Crypton VC through any means, including (but not limited to) through the use of hacking, malware, viruses, illegitimate credentials, phishing, brute force attacks, SQL exploits, or any other method of detrimentally intercepting, interrupting, or damaging any information or functionality related to the Site. You also agree not to transfer access to your Account (as defined below) or any other rights granted to you by these Terms.

3. Registration and Account

The use of our Services requires you to create an account with Crypton ("Account"). You warrant and represent that all information provided when creating such an Account is current, complete, and accurate. You agree to promptly notify Crypton of any changes to any information that would cause the information provided upon your Account's creation to no longer be current, complete or accurate. You also warrant and represent that you understand that Account may be registered incompletely until you confirm your email address in a manner deemed suitable by us. Crypton may request you to provide additional information such as proof of your identity, physical address and source of funds at any time to use our Services. If you refuse to provide such information or it will be determined that you may not use our Services for any reason, you will be denied Services. In such case, your purchase

of Tokens will be cancelled and you will receive a refund in the same form of payments as was made by you and to the same wallet address, bank account, or a third party payment processor where your funds were transferred from. We may deduct the transaction cost from the refund amount, if any. Scope of information to be requested from each user may differ. You agree that you exclusively will access and use your Account, and may not transfer the right of its use or disclose any log-in credentials to a third party without our written consent. You agree to take full responsibility for any activity that occurs through the use of your account, and cannot transfer this obligation to any third party. You agree to notify Crypton in the event that you discover or suspect any security breaches or vulnerabilities related to the Site or Services. Depositing of funds in account is effected without any confirmations from Crypton, except for displaying of updated deposit balance in Account at website. Crypton VC has the right to enter into agreement with any of Purchasers on special conditions (including commercial conditions) which may be different from those stipulated by this Terms.

4. Damages Caused by Vulnerabilities Inherent in the Internet or in Blockchain

Use of the Internet may not be secure. You agree that Crypton VC is not responsible whatsoever for any damages caused by the interception, loss or alteration to any information sent over the Internet. While Crypton VC will take reasonable steps to ensure the security and privacy of any information transmitted during your use of our Services, in no event will any such information be considered "confidential" or will its disclosure to a third party, accidental or otherwise, cause liability against Crypton, even if it occurs as a result of our negligence. Crypton takes every reasonable precaution to prevent and mitigate attacks. However, these problems still may occur from time to time for reasons that are out of our control. If Crypton believes its Site or any Tokens located on the Site has been compromised or is under attack, Crypton reserves the right to immediately stop all Services provided through the Site. If it is determined that such an attack caused an associated Token to rap deposits, withdrawals, Account balances, Services or other disputes related to an attacked Token will be determined on a case-by-case basis. Crypton makes no representation and does not warrant the safety of the Site and is not liable for any lost value or stolen property, regardless of whether Crypton VC was negligent in providing appropriate security.

5. Crypton Does Not Provide Legal, Financial or Other Professional Advice

In no way should our providing of Services be considered legal, financial or any other kind of specialized or expert advice on which the User might detrimentally depend, causing liability against Crypton. In using the Site, you represent and warrant that you have sought any legal, financial or otherwise specialized advice from an expert qualified to provide such counsel, or else you have the sufficient knowledge and sophistication to evaluate the risks and merits associated with Blockchain and/or Token management and offerings and to competently use our Services. We give no warranty regarding the suitability of any Tokens or our Services and assume no fiduciary duties to you. You represent and warrant that you understand that any recommendations or commentary made by Crypton or its employees or other users should be considered generalized in nature, and you should use your own judgment or seek the advice of an expert before taking any action regardless of such statement. We give no assurance as to the accuracy or completeness of any such statement.

6. License

We grant you a limited, nonexclusive, nontransferable license ("License") to access and use our Site and Services. This License is subject to these Terms. Any other use of the Services not expressly permitted by these Terms is prohibited. All other rights are expressly reserved by Crypton VC and our licensors, including that to any content or functionality as presented on the Site or Services. "Crypton", "Crypton.vc", all logos related to Services or displayed on the Site are trademarks or registered marks of Crypton or its affiliates. You will not redistribute, claim ownership, license, deconstruct, reverse engineer, alter, incorporate into any other works or websites, or otherwise exploit any such content or functionality without prior express written consent of Crypton.

7. Termination

We may terminate or suspend your License to our Services without prior notice or liability for any reason whatsoever, including (but not limited to) if you breach the Terms. Nothing in these terms or in any other communication or action by Crypton or our employees, agents or representatives should be taken as a waiver of any legal remedies available for any event causing termination. All provisions of the Terms which by their nature should survive termination shall survive termination, including (but not limited to) ownership provisions, disclaimers or limitations of obligations or liability, and indemnity.

8. Copyright of Communications In Connection With Our Services

You agree that any materials, information or communications transmitted between the User and Crypton in any form and by any means are non-confidential and will become the sole, exclusive property of Crypton. Crypton will own all intellectual property rights to such communications or materials, and can use or disseminate them in a completely unrestricted fashion for any legal purpose, commercial or otherwise, without notifying or compensating you. You hereby waive any right to litigation or recovery for perceived damages caused by the use of this information as is permissible by law.

9. Indemnification

You agree to indemnify, exculpate and hold Crypton, its representatives, affiliates, employees and service providers harmless from any claim or demand permissible by law arising out of or related to the use of the Services, including but not limited to any breach by you of these Terms or violation of any law, rule, or rights of a third party. You agree to pay for any legal fees or other costs that incurred by Crypton or any other indemnified parties as a result of your actions.

10. Disclaimer of Warrants and Guarantees

Crypton VC does not guarantee any level of performance or the continued, uninterrupted availability of our Services. We do not guarantee the accuracy of any information provided on the Site. We hereby disclaim all warrants and guarantees that not expressly made in these Terms.

11. Applicable Law and Venue

The validity, interpretation, construction and performance of these Terms, and all acts and transactions pursuant hereto and the rights and obligations of the parties hereto shall be governed, construed and interpreted in accordance with the laws of Gibraltar without giving effect to principles of conflicts of law. Terms of Token Sale, Terms of Service and Privacy Policy are a single set of rules which regulate the relationships between Purchaser and Crypton. You cannot accept it the partially, this set of rules should be accepted in full. Should any conflict between Terms of Token Sale and Terms of Service, Terms of Token Sale shall prevail. Should any conflict between Terms of Service and Privacy Policy, Terms of Service shall prevail.

12. Arbitration

Except for any disputes, claims, suits, actions, causes of action, demands or proceedings (collectively, "Disputes") in which either Party seeks injunctive or other equitable relief for the alleged unlawful use of intellectual property, including, without limitation, copyrights, trademarks, trade names, logos, trade secrets or patents, you and Crypton (i) waive your and Crypton's respective rights to have any and all Disputes arising from or related to this Agreement resolved in a county court, and (ii) waive your and Crypton's respective rights to a jury trial. Instead, you and Crypton VC will arbitrate Disputes through binding arbitration (which is the referral of a Dispute to one or more persons charged with reviewing the Dispute and making a final and binding determination to resolve it instead of having the Dispute decided by a judge or jury in court).

13. No Class Arbitration, Class Action or Representative Actions

Any Dispute arising out of or related to these Terms is personal to you and the Crypton and will be resolved solely through individual arbitration and will not be brought as a class arbitration, class action or any other type of representative proceeding. There will be no class arbitration or arbitration in which an individual attempts to resolve a Dispute as a representative of another individual or group of individuals. Further, a Dispute cannot be brought as a class or other type of representative action, whether within or outside of arbitration, or on behalf of any other individual or group of individuals.

14. Arbitration Procedure

If allowed under the applicable law, any Dispute shall be referred to and finally resolved by arbitration administered by the Arbitration Court of the Estonian Chamber of Commerce and Industry ("ACECCI") in accordance with the Code of Civil Procedure ("CoCP") of Estonia for the time being in force, which rules are deemed to be incorporated by reference in this clause. The seat of the arbitration shall be Estonia. The Tribunal shall consist of three (3) arbitrator(s). The language of the arbitration shall be English. Otherwise, the jurisdiction for arbitration shall be determined according the applicable law.

15. Survival and Severability

Any portion of these Terms that reasonably should survive the termination of your License or any other agreement is hereby agreed to do so. If any provision of these Terms is deemed illegal, invalid or otherwise invalid for any reason, then that provision will be severed and the rest of these Terms will remain intact and enforceable.

16. Integration

Our failure to exercise or enforce any rights or provisions of these Terms does not constitute a waiver of those rights or provisions. These Terms represent the entire and complete agreement between the User and Crypton, including any future modification of these Terms, superseding any prior agreements or communications between you and us. Any ambiguities in these Terms shall be construed in the light most favorable to Crypton.

17. Act of God

Crypton' performance under these Terms shall be excused if the failure of such performance is caused by forces beyond its reasonable control. This includes (but is not limited to) acts of God, acts of any government, war or civil unrest, severe weather, fire, natural disasters, political embargos, terrorism, power or equipment failure, industrial or labor disputes or controversies, acts of any third party, or blockchain failures.

18. Contact Us

If you have any questions about these Terms, please contact us at support@crypton.vc

PRIVACY POLICY

We ask you to read carefully this Privacy Policy ("Policy"). The Privacy Policy explains how Crypton.vc, ("Crypton", "Crypton VC", "Company", "we" or "us") collects, stores, uses and protects personal information, when you access or use the website

http://crypton.vc (collectively with all of its subdomains and all their respective pages, the "Website"), the online services at the Website ("Services"), or when you otherwise interact with us.

Terms of Token Sale, Terms of Use and Privacy Policy is a single set of rules which regulates the relationships between Purchaser and Crypton. You cannot accept it the partially, this set of rules should be accepted in full. Should any conflict between Terms of Token Sale and Terms of Use, Terms of Token Sale shall prevail. Crypton cannot comply with the requirements of all jurisdictions worldwide while doing business. If any provisions of this document break or to transgress or to violate the law to which you are subjected to, then law of your jurisdiction shall prevail. Entering into relationship with Crypton you shall oblige your jurisdiction law.

Crypton may withdraw from this Privacy Policy which each of you have accepted, i.e. to refuse the further service.

About persons under the age of 18

We do not and will not knowingly collect information from any person under the age of 18. If you are under the age of 18, you may not use this Website unless you have the consent of, and are supervised by a parent or guardian.

1. Collection of Information

When you use Crypton's websites crypton.vc and tokensale.crypton.vc or other Crypton's services ("Site"), you may provide your personal information voluntarily, including but not limited to your name, residential address, email address, and digital wallet address or bank account information, depending on your method of payment. In addition, you may provide some information involuntarily such as any information sent to Crypton VC by your computer, cell phone or other access device. This information may include your IP address, device information, including but not limited to identifier, name and type, operating system, location, mobile network information and standard web log information, such as your browser type, traffic to and from Crypton's Site and the pages you accessed on Crypton's Site. In addition, Crypton VC may collect personal information from or about you in other ways such as your interaction with customer support or contractual relationships with Crypton VC. Crypton VC is not obligated to collect any of your information and may do it at its own discretion.

2. Setting up and Using an Account

In order to purchase tokens through Crypton Site, you are required to set up a personal account and provide your personal information such as name and email address to secure your access to your account. You are responsible for relevance and validity of information to be provided when registering an account. Crypton VC may require you to provide additional information to verify your identity, address, source of funds or any other information in your account, such as your date of birth, copy of ID, citizenship, country of residence, and other information directly or through a third party. Crypton VC is not obligated to verify your identity or any other personal information and may do it at its own discretion. You can review your personal information inside of your account. You can edit your personal information or delete your account by contacting Crypton customer service. If you cancel or delete your account, Crypton VC may keep your information in its database. This may be necessary to deter fraud by ensuring that a person who tries to commit fraud will not be able to avoid detection simply by closing his/her account and opening a new account. However, if you close your account, your personally identifiable information will not be used by Crypton for any further purposes, nor sold or shared with the third parties, except as necessary to prevent fraud or money laundering and assist law enforcement in accordance with this Privacy Policy. Crypton VC has the right to enter into relationship with anyone on special conditions (including commercial conditions) which may be different from those stipulated by this Privacy Policy.

3. Use of Cookies

Crypton VC or its partners may place small data files (cookies) or pixel tags on your computer or other device when you access Crypton Site. Crypton VC may use these technologies to recognize you as a returning user, customize its services, content and advertising, evaluate marketing activities, and collect information about your computer or other access device. Crypton may use various cookies, including but not limited to session cookies, persistent cookies, and "flash cookies." Crypton may codify its cookies to limit access of third parties to the received information. You can independently control the use of cookies from your browser or browser add-ons; however, blocking or disabling Crypton's cookies may interfere with your use of Crypton's Site. Crypton VC is not obligated to place cookies on your computer and may do it at its own discretion.

4. Use of Log Files

Crypton VC may use the log files to collect your Internet protocol (IP) addresses, type of browser, Internet Service Provider (ISP), date/time stamp, referring/exit pages, and number of clicks to analyze your activity on the Site, collect geographic and demographic information, and evaluate content of the Crypton's Site. Information collected from log files is not personally identifiable. Crypton VC is not obligated to use log files and may do it at its own discretion.

5. Storing, Using, and Sharing Your Personal Information

Crypton VC will store your personal information in its database. Crypton may contract third parties to store your personal information. Crypton does not sell or rent your personal information to third parties for their marketing purposes without your explicit consent. Crypton may use your personal information to customize your use of Crypton's Site and services; analyze your activity on Crypton's Site, including through third parties such as Google Analytics and alike; evaluate and improve its marketing efforts and for other reasons relevant to your use of Crypton's Site and services.

Crypton VC may share your personal information with:

• Third parties who provide services to Crypton for storing your personal information, fraud prevention, marketing and technology, services of a sale; such third parties are bound by contracts with confidentiality and non-disclosure clauses and may not use your personal information for any reason other than specified in this Privacy Policy.

• Escrow or any other processor of your payment.

• Law enforcement, government officials, or other third parties when Crypton is required to provide your personal information by law, subpoena or court order.

• Parent and/or subsidiary company.

• Other third parties with your consent or direction to do so.

6. Protection of Data

We take appropriate security, administrative, and technical measures to protect any personal identification information you provide regarding the collection, storage, and processing, as well as security measures to protect your User Account against unauthorized access, modification, disclosure or destruction of your personal identification information. The transmission of data or information (including communications by e-mail) over the Internet or other publicly accessible networks is not one hundred percent secure. Company Parties are not liable for the security of any data you are transmitting over the Internet, or third-party content. Any transactions on the blockchain network are public and Company Parties cannot exclude transaction data from the blockchain.

7. Severability

In the event any provision of this Privacy Policy is found to be invalid, illegal, or unenforceable the remaining provisions of this Privacy Policy shall nevertheless be binding you with the same effect as thought the void and unenforceable part had been severed and deleted.

8. Change of Privacy Policy

We reserve the right to modify or amend this Policy at our discretion. The updated version becomes effective at the time of posting. It is your responsibility to check updates regularly.
